

Vehicle access control solutions

For efficiency, security and improved service levels

Automated vehicle access systems are a very important and highly visible part of any perimeter security solution. Our systems feature Axis devices together with our partners Automatic License Plate Recognition (ALPR) applications, as well as barriers to manage access of approved vehicles into parking lots while denying access to any unauthorized vehicles. This increases operational efficiency and parking security as staff, tenants and approved users gain secure and easy access to parking spaces. It also means less reliance on manned guards, reducing lifecycle costs.

OVERVIEW OF VEHICLE ACCESS CONTROL SOLUTIONS

Our range of vehicle access control systems are suited for the two usage scenarios shown below. Both systems are easy to install, configure and deploy as they are self-contained systems accessed via a web interface.

VEHICLE ENTRY AND EXIT

Vehicle entry and exit: control your lot — simply, securely and with precision

- > The camera-based ALPR system handles all steps, i.e.: vehicle image capture, vehicle list management, access decisions and barrier control
- > Automates access by verifying license plates against lists of authorized vehicles
- > Safeguard people and asset in the barrier/gate area

VEHICLE ACCESS CONTROL

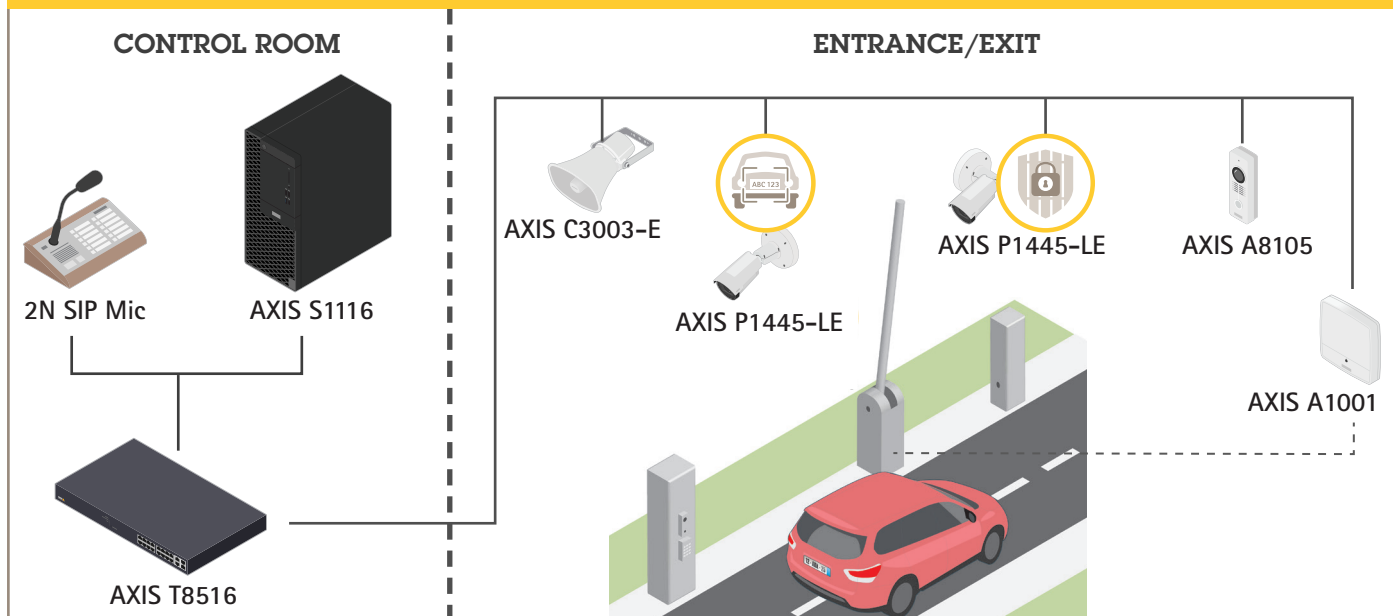

Vehicle access control: adds advanced, dynamic access control features to your lot

- > Door controller manages entry decisions based on license plate verification together with additional entry factors, i.e. day-of-week, time-of-day, different credential types, etc.
- > Easy to manage list of authorized and unauthorized vehicles

Vehicle access control solutions

Axis supports better visitor management. Install any Axis network door station to handle visitors and unknown license plates. Below is an example of a vehicle access system that integrates audio, video recorders, network switches, microphones, an ALPR application, a door controller, intercom, cameras and barrier control functionality.

AXIS AND PARTNER OFFERINGS

Our ALPR partner offerings are simple to operate, offer accurate detection and verification as well as excellent image quality.

Proven edge-based ALPR applications accurately detect car plates and verify them against white lists.

AXIS Perimeter Defender is a high performing analytics that allows you to verify clear space before a gate closes with high accuracy.

CONNECT PUBLIC ADDRESS SYSTEM AND VIDEO MANAGEMENT SOLUTIONS SO YOU CAN BE PROACTIVE AND BETTER MANAGE INCIDENTS

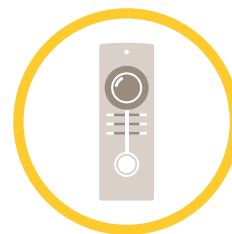

An out-of-the-box solution can facilitate connection of all devices, including power and recording system. It also supports smart search of cars in video from the database.

Automate announcements or alerts to prevent incidents from occurring or deter illegal use.

Simple button for manual control of the gate/barrier and make announcements to alert emergencies.

Two-way communication between the driver and control center with visual and audio assistance.
