Axis introduces first 60 fps video encoder solution

Axis Communications, the world leader in network video, introduces a strong addition to the video encoder family, AXIS Q7411 Video Encoder. The new one-channel video encoder with outstanding video processing capabilities is the perfect solution for analog installations migrating to IP. The video encoder is ideal for any application with high demands on frame rate, image quality and performance.

“With AXIS Q7411 Video Encoder, Axis is continuing to show market leadership by being the first to introduce a high performance video encoder solution offering 60 frames per second,” says Erik Frännlid, Director of Product Management, Axis Communications. “This top-of-the-line single channel video encoder is a perfect complement to our existing product portfolio, and addresses the market’s demand on quality and performance”.

The support for 60/50 fps provides smooth video in high motion scenes. This also enables the user to more closely follow details and changes in the monitored area, which is of great importance in forensic work. AXIS Q7411 can deliver multiple, individually configured video streams simultaneously, at full frame rate in all resolutions. The video encoder offers the highly efficient H.264 video compression format both in Base and Main profile, giving significant savings in bandwidth and storage. Motion JPEG is also supported for increased flexibility.

AXIS Q7411 supports key IP surveillance features such as two-way audio, configurable I/O ports, edge storage with the built-in microSD/microSDHC memory card slot, and Power over Ethernet (IEEE 802.3af). For significant installation savings, the video encoder allows PTZ control over the coaxial cable, in addition to standard support for PTZ cameras using the serial ports.

The new video encoder provides powerful event management capabilities with embedded intelligent video features such as tampering alarm, motion detection and audio detection, in addition to support for AXIS Camera Application Platform.

AXIS Q7411 is supported by AXIS Camera Station video management software as well as the industry’s largest base of application software through Axis’ Application Development Partner program. Furthermore the video encoder includes support for AXIS Camera Companion, Hosted Video and ONVIF for easy camera system integration.

AXIS Q7411 Video Encoder will be available to order in October through Axis’ distribution channels. For photos and more, please visit

About Axis Communications

As the market leader in network video, Axis is leading the way to a smarter, safer, more secure world — driving the shift from analog to digital video surveillance. Offering network video solutions for professional installations, Axis' products and solutions are based on an innovative, open technology platform.

Axis has more than 1,000 dedicated employees in 40 locations around the world and cooperates with partners covering 179 countries. Founded in 1984, Axis is a Sweden-based IT company listed on NASDAQ OMX Stockholm under the ticker AXIS. For more information about Axis, please visit our website www.axis.com
