Lund, June 7, 2007

Axis Network Document Server will be Bundled with New HP Scanjet to Improve Productivity and Reduce Cost

Axis Communications announced today that AXIS 70U Network Document Server will be bundled with the recently announced HP Scanjet 7650n Document Flatbed Scanner. Ideal for small and medium businesses, the new bundle will offer customers reduced costs and improved productivity. First available in Europe, the Middle East and Africa in 2006, this offering is now extended to small and medium business customers in the U.S. market.

“Sales of the AXIS 70U Network Document Server significantly increased in 2006 as a result of our bundle with HP,” said Fredrik Nilsson, general manager of Axis Communications. “The solution has a proven track record in EMEA and we believe that success will carry over into the U.S. market.”

The solution enables users to digitize and manage paper-based information by simply scanning in a picture, form or document and selecting a destination address from the distribution list on the AXIS 70U Network Document Server. After pressing “send,” the scanned item is digitized and sent as an attachment to the specified location in three easy steps. This solution significantly lowers costs while increasing speed and reliability versus courier, fax or traditional mail distribution. The solution can scan and send scanned materials to email or fileservers and can be integrated with document archiving and databases with a built-in XML API.

The HP Scanjet 7650n ships with the AXIS 70U and is expected to be available in the United States starting June 2007.

About Axis

Axis is an IT company offering network video solutions for professional installations. The company is the global market leader in network video, driving the ongoing shift from analog to digital video surveillance. Axis products and solutions focus on security surveillance and remote monitoring, and are based on innovative, open technology platforms.
