State of the art waste management plant benefits from Axis network cameras

Axis Communications, the global leader in the network video market¹ has provided a new IP surveillance system at the Donarbon waste management park which has helped the business to save money both in terms of operations and insurance premiums.

Donarbon, which is Cambridgeshire's largest waste management park and Mechanical and Biological Treatment (MBT) plant, has replaced an analogue surveillance system with multiple, strategically placed Axis network cameras. The main driver for this change was to be able to identify unsuitable and hazardous waste entering the site, as well as providing clear images to site staff in the event of an incident.

Huw Gaskill, MBT manager at Donarbon, said "The Donarbon waste management plant is open to the public seven days a week. Although the majority of visitors abide by the rules of what can or can't be taken to the site as black bag waste, we were becoming increasingly used to finding out of the ordinary objects. On one occasion a ship's anchor was brought here. This issue is one of the main drivers for ensuring that the site is closely monitored to identify and discourage this practice."

The MBT plant is the centrepiece of the 28-year PFI waste management contract between Cambridgeshire County Council and Donarbon and is responsible for treating the majority of household waste from Cambridgeshire and ensuring that councils meet their recycling and landfill diversion targets.

The Axis cameras were recommended by consultants 3IT, who have also installed them at Donarbon's MBT plant where they have helped to reduce the down time of the machinery in the event of breakdowns.

Gaskill said: "The plant's engineers are able to remotely monitor the equipment and quickly identify any faults, and the MBT plant technology providers, who are based in Austria, also have remote access to the surveillance system to assist the on site technicians with fault diagnosis when needed. The cameras' PTZ functionality means that we can rotate the cameras 360 degrees and zoom which greatly assists with quickly locating blockages."

The cameras are also helping to save money when it comes to insurance claims as Donarbon can now prove liability. Whenever a vehicle enters or leaves the site, managers now have video evidence and if any damage is caused they can quickly identify the vehicle responsible.

Donarbon's IP surveillance system is even being used to educate visiting school parties on recycling and waste management as staff can show pupils how the MBT plant works without

them having to go anywhere near the machinery.

Phil Doyle, regional director, Northern Europe, Axis Communications, said: “Donarbon needed high quality images and the ability to share footage remotely over its network, something that its existing analogue surveillance system was incapable of delivering. Now, thanks to its IP-based system, the park is able to run more efficiently, safely and at a much cheaper cost than before.”

Notes to editors

1 Axis Communications is the global market leader in the network video market. The network camera market is set to have a CAGR of 27 per cent per year over the next five years. The world market for video surveillance products is forecast to be worth more than \$14,474 million by 2014 according to industry analyst house IMS Research (www.imsresearch.com) in its latest market report entitled ‘The World Market for CCTV and Video Surveillance Equipment 2009 Edition’ published in August 2009.

About Axis

Axis is an IT company offering network video solutions for professional installations. The company is the global market leader in network video, driving the ongoing shift from analogue to digital video surveillance. Axis products and solutions focus on security surveillance and remote monitoring and are based on innovative, open technology platforms.

Axis is a Swedish-based company, operating worldwide with offices in more than 20 countries and cooperating with partners in more than 70 countries. Founded in 1984, Axis is listed on NASDAQ OMX Stockholm under the ticker AXIS. For more information about Axis, please visit our website at www.axis.com
