Axis cameras keep watch over Manchester City Council

Axis cameras have been installed in the prestigious Grade II listed Manchester Town Hall Extension and Central Library as part of a significant redevelopment of the Council's central accommodation.

Axis Communications and partner, Grantfen Fire and Security (Grantfen), developed a state-of-the-art solution that combined Axis network cameras and Genetec's Security Centre video management software. To effectively cover the 680,000 sq ft area of both sites, the surveillance specification for the project included over 200 Axis cameras.

Atul Rajput, Axis' regional director, northern Europe said: "The civic nature of Manchester City Council's sites means that buildings must be secure, while remaining open for public access – for meetings, enquiries, transactions and admission to other facility services – all of which can present a security challenge.

"The council further specified that the project must include cameras that not only delivered excellent picture quality and advanced feature applications, but that were also aesthetically pleasing and did not diminish or detract from the look of the historic buildings.

"To meet these requirements, we deployed our innovative and ultra-compact AXIS M3005-V Fixed Dome Network Camera as part of an integrated solution, featuring intrusion detection, fire alarms, a building management system, emergency lighting protocols, flood and leak detection, lift alarms and network-enabled intercoms."

The new Axis system replaced an assortment of mismatched legacy analogue CCTV systems which had been fitted over time in both the Town Hall Extension and Central Library buildings. Both sites were controlled by various incompatible management software packages and concerns were raised that, as the historic security system aged, its vulnerabilities were becoming pronounced and it was essential that archived video footage was appropriately safeguarded.

Atul continued: "Our partner, Grantfen, won a competitive tender to implement an effective IP-based video and access control solution for Manchester City Council as part of the wider redevelopment of its central accommodation, which includes a Grade II listed property and buildings of distinct architectural significance. A key priority therefore, was that any camera used in the project, must be high resolution enough to meet the Council's security requirements, but unobtrusive enough? so as not detract from the historic buildings.

After a proof of concept trial at the start of the project, Axis was chosen as the preferred supplier. The palm-sized AXIS M3005-V Fixed Dome Network Camera tested best in the line-up: it met

all of the Council's requirements, combining outstanding HD-quality video, with a modest, unobtrusive footprint and robust reliability in a wide variety of applications. The camera's broad-spectrum of feature-rich functionality was also crucial.

Graham Cole, operations director at Grantfen, said: "Thanks to their broad product range, partnering with Axis meant that we could use one manufacturer throughout, with one consistent user interface to achieve a high degree of synergy across the system."

Custom integrations were designed between the Axis and Genetec systems meaning that alarms would be relayed to a centralised control area in case of emergencies, with detailed procedures added to instruct security operators how to proceed in the event of an exception alarm. Advanced capabilities like people counting were also included in the Central Library to allow the council to verify visitor numbers. Thanks to the manoeuvrability and exceptional range of motion of Axis equipment, cameras were able to be mounted in areas that previously had an obstructed view.

Graham explained: "In the case of the Central Library entrance, mounting a camera proved quite a challenge because of the door's unusually narrow transom, which was too small to accommodate most surveillance cameras." The AXIS P1214 Miniature HDTV pinhole camera was therefore selected to account for this discrepancy and to allow subtle and discreet surveillance in this high-visibility area.

Ian Jackson, sales director at Grantfen, concluded: "This technology is steering Manchester City Council towards greater efficiency and improved customer service. Despite more access being granted to the public, the new security system has made the buildings feel more secure and the management team confident in the knowledge that Manchester City Council staff, visitors and important archive documentation are all being effectively protected."

Thanks to the overwhelming success of the project, discussions are now underway to replicate the installation to cover the main Town Hall building.
