Axis launches small and powerful network video door station

AXIS A8105-E Network Video Door Station secures your premises and simplifies visitor management by combining an IP camera, a communication device, and a convenient door opener in one small unit. The door station is 1.89 in. wide and can be mounted discreetly.

Axis Communications, the market leader in network video, introduces AXIS A8105-E Network Video Door Station that can allow operators to monitor entrances, communicate directly with visitors, and open doors remotely, using a mobile app, IP phone or Video Management System (VMS). The door station is ideal for installations within the retail, education or healthcare segments and its small size allows it to be installed where space is limited.

"AXIS A8105-E is a great complement to our line of Network Door Stations, and offers excellent video quality, high quality audio and door opener functionality," said Fredrik Nilsson, VP, Americas, Axis Communications, Inc. "Given its small size and robust capabilities, this product would be a great supplement to any video surveillance system."

HDTV 1080p resolution and WDR – Forensic Capture deliver uncompromised visual identification even with strong backlighting, and LED's provide enough light to see visitors at night. Axis' Corridor Format easily adjusts the viewing area to the location and increases the vertical area of view, which makes it possible to identify tall visitors even when the door station is mounted low. With factory focus and support for Power Over Ethernet (PoE), installation is fast and flexible, which keeps costs low. An optional flush mounting accessory enables recessed mounting in most wall materials.

Acoustic echo cancellation and noise suppression make voices audible regardless of background noise. Due to open standards such as SIP and ONVIF, AXIS A8105-E can be seamlessly integrated into existing VMS and Voice Over IP (VoIP) telephony systems.

AXIS A8105-E is supported by the industry's largest base of video management software through the Axis Application Development Partner (ADP) Program and AXIS Camera Station. Third-party audio and video analytics applications can be installed through AXIS Camera Application Platform.

AXIS A8105-E will be available in early Q3 2016 through Axis' standard distribution channels.
