

City of Junin monitored by Axis.

With the IP video surveillance system, the municipality achieves greater identification of offenders and support for investigators.

Organization:
Municipality of Junín

Location:
Junín, Buenos Aires,
Argentina

Industry segment:
City surveillance

Application:
Safety and security

Axis partner:
Conectia Wireless S.A

Mission

The Municipality of Junin, in Buenos Aires, Argentina, had a need to incorporate a video surveillance system that would allow it to prevent and combat criminal acts, in order to provide greater security for citizens. At the same time, the solution needed to cover the entire map of crime and comply with recommendations set out by the Ministry of Justice and Security.

Solution

After analyzing the place and its needs, Conectia Wireless concluded that it was best to implement a video surveillance system with Axis IP cameras to allow the Ministry of Justice and Security to expand the number of cameras in the future and achieve the best image quality. In the first stage, 30 AXIS Q6032-E Network Cameras were installed, and then, due to their success, the city decided to add 10 more. AXIS Q6032-E proved to have the best price-quality on the market and had been successfully tested in other municipalities.

Result

With the Axis IP video surveillance network, the city of Junin increased its security level, reducing incidents and quickly solving incidents such as theft and accidents. The images obtained with Axis cameras became an additional deterrent to complement other security systems and the system allows for recalling the file with the images recorded as evidence in investigations. In addition, the images are viewed from a monitoring center that is controlled by civilians in the municipality in conjunction with police officers, in coordination with the 911 emergency center.

"It should be noted that the facts are recorded from the beginning and that the work done from the Monitoring Center, along with the Police Communications Center, shows that the central axes of the work are the prevention and deterrence of crimes."

Victor Knappe, Secretary for Security of the Municipality of Junín.

Flexible and agile system

The need of the municipality of Junín was to incorporate a video surveillance system to lower the rate of security incidents, and control all parts of the city, as a complementary tool for the security forces. It was to be a scalable system that would allow for incorporating cameras gradually.

For this project, Conectia decided on Axis IP cameras due to the reliability of the brand, the ability to incorporate and model the complexity, its open standards and the excellence of the product. "We chose Axis due to the high quality of their cameras, their proven successful experience in several municipalities and their ability to comply with the recommendations set forth by the Ministry of Justice and Security of the province of Buenos Aires," said Federico Gamarra, Commercial Manager for Conectia.

Advantages of Axis IP video

- > Effective protection of persons and property
- > Improving the city's image
- > Greater real security and sense of security
- > Reduce costs due to vandalism
- > Better management of infrastructure; for example, traffic monitoring
- > Faster and easier investigations

About Axis Communications – www.axis.com

As the market leader in network video, Axis is leading the way toward a safer world - leading the change from analog to digital video surveillance solutions. Offering network video solutions for professional installations, the Axis products and solutions are based on innovative, open technology platform. Axis has more than 1,400 employees in 40 locations around the world and cooperates with partners covering 179 countries. Founded in 1984, Axis is a Swedish IT company listed on the NASDAQ OMX Stockholm Stock Exchange with the ticker AXIS.

Present in Argentina since 2008, with offices in Buenos Aires and a dedicated local team, Axis has managed projects in this country that are a reference in the video surveillance market, both in the private and public sectors. Among them are: Municipality of Berazategui, National Ministry of Transportation, Department of Homeland Security, Guemes Sanatorium, Espasa Concessionaires, major shopping centers, banks, private neighborhoods and transportation companies.

About Conectia – www.conectia.com.ar

Conectia Wireless SA is a national company with over 26 years of experience in the communications market, which designs, integrates and implements solutions based on wireless connectivity. Their experience, the quality of their solutions and the support from reputable companies - Cisco, Motorola, Milestone, IBM and Axis, among others- make Conectia a leading company in the Communications, Security and Networking market.
