

Axis provides security at tobacco factory.

Certified tobacco factory opts for flexible surveillance system from Axis.

Organization:
Hanzhong Tobacco
Factory

Location:
Shaanxi, China

Industry segment:
Industrial

Application:
Production management

Axis partner:
Beijing Sinowave
Telecom Technology
Co., Ltd.

Mission

Founded in August 1975, Hanzhong Branch of Shaanxi Tobacco Factory has an annual production capacity of 0.4 million boxes of tobacco. In 2003, the company was certified with ISO 9000 standard and obtained a "Quality Management System Certificate". In 2005, the company was accredited as "National Leading Unit in Spiritual Civilization".

As one of the leading tobacco manufacturing enterprises in China, they have many advanced tobacco processing and packaging devices. In order to improve the production management and product quality, the Hanzhong Tobacco Factory management decided to build an IP-based security system.

Solution

After careful investigation and in-depth analysis, Axis network cameras were selected and Sinowave, a software development organization and Axis partner, implemented the system.

In the surveillance system, over 200 Axis network cameras were deployed, including fixed cameras, fixed dome cameras and pan-tilt-zoom dome cameras. The system uses Video Command, Control and Communication (VC3) platform from Sinowave.

Result

The management of Hanzhong Tobacco Factory is pleased with the solution: "This project is built upon the state-of-art network video technology. Axis network cameras are widely deployed in entire system, and they ensure successful implementation and acceptance of the project with their excellent video quality, outstanding network performance and especially, their flexible application interfaces," said Hu Yongzhen, Manager of Information Communication Dept., Hanzhong Tobacco Factory.
