

Eye Spy The **AXIS 207W** IP camera

The AXIS 207W is an Internet Protocol (IP) camera that is ideal for securing small businesses, home offices and residences over a local area network or the Internet. The high performing wireless transmission with a wide coverage range gives users the freedom to place the camera where it is needed, instead of where the network outlet is. The built-in microphone enables remote users to not only view, but also listen in and increase monitoring options. The system provides excellent images, even in low light conditions, which is particularly important in security work.
