

HDTV video quality in fixed domes

Axis Communications has introduced a series of indoor and outdoor-ready fixed domes designed for quick installation with remote focus and zoom capabilities and offering high performance video including HDTV image quality and multiple H.264 streams. The cameras are ideal for unobtrusive video surveillance in exposed areas such as airports, retail buildings, railway stations and subways. The Axis P33 network cameras range from standard indoor models to vandal-resistant outdoor models perfectly adapted for harsh environments. The weather-proof models of the Axis P33 series operate in extreme temperatures, powered by standard power over Ethernet (IEEE 802.3af). The cameras use progressive scan technology, providing superb video quality in 30 frames per second, in full resolution.
