Axis M10 network camera

Axis Communications, the global leader in the network video market, has introduced the Axis M10 range of Network Cameras to the South Africa public. The M10 series of small and smart cameras are ideal for securing locations such as small businesses, boutiques, restaurants, hotels and residences. These affordable, intuitive and reliable cameras offer best-in-class image quality and professional monitoring capabilities at 30 frames per second in VGA resolution.

All cameras in the Axis M10 series provide multiple, individually configurable, high-resolution video streams in H.264, Motion JPEG as well as MPEG-4 Part 2 at full frame rate. H.264 compression enables optimisation of storage and bandwidth efficiency by significantly reducing the bit rate. Using progressive scan technology, the cameras provide VGA images of moving objects without motion blur.
