AXIS launches T8412 installation display

Handheld device for fast and easy camera setup

AXIS T8412 is a battery-powered handheld device that greatly simplifies the field installation of both Axis network cameras and analogue cameras. It displays live video from a camera and makes setting a camera's viewing angle and focus at the installation site easier than with the use of a laptop or remote computer. It offers user-friendly features such as touchscreen, zoom and snapshot functions. AXIS T8412 can connect directly to a camera, or to a network and search for Axis network video products. An Axis camera with built-in PoE support can even be powered directly by AXIS T8412, which gives installers greater flexibility.
