

# Higher education: Think bigger.

Network solutions for a better student experience.

IP-based video, audio, and other devices might be best known for their role in campus security, but they're versatile tools that can also help you help increase student satisfaction. Both inside the classroom and out, network solutions can set students up to achieve more, engage in richer learning, optimize their schedules – even reach a global audience.

## Customer needs

Attracting and retaining high-achieving students and faculty is a complex task. Today, many students are seeking more flexibility and autonomy in their learning experience. At the same time, these students are very aware of the increased need for practical, hands-on training in their field, as well as the importance of connecting with the right audience for their studies, skills, and accomplishments.

Flexible, intelligent network solutions can help give you a competitive edge.

## Benefits of a network solution

- > Stream performances and events to a global audience
- > Improve hands-on training
- > Make the most of instructor resources
- > Extend access to campus resources and facilities
- > Comply with privacy regulations and cybersecurity practices

# Featured use cases

## Think flexibility

Offer your students **increased autonomy** with solutions that help them **optimize** their schedules and keep up when illness or injury keep them away. For example, IP-based access control lets you make relevant resources like labs, fitness centers, and libraries available to students 24/7, using credentials customized according to their course of study, extracurriculars, and their role.

Access control

## Think opportunity

Excellent higher education prepares and positions students for their future, whether that's giving them richer hands-on training or extending the audience for their performances, presentations, and events.

Hands-on training
