

Improve law enforcement efficiency with connected video solutions

Real-time efficiency from crime scene to conviction

With new intelligent video solutions, you can increase the speed and success of your efforts to battle crime. Your operations center becomes the hub not only for your city's security cameras, but also for coordinating and supporting the efforts of your first responders. Connected video solutions strengthen your resources and ability to make a difference – when and where it matters.

- ✓ **React quicker** 
- ✓ **Respond better** 
- ✓ **Resolve more effectively** 

✓ React quicker

- > **Get an immediate alert the moment something happens**
Automatic incident alerts, provided by video analytics, sensors or alarms, boost your monitoring capabilities and shorten your response times
- > **Prevent incidents without deploying resources**
Use onsite audio and other measures to automatically or remotely stop incidents in progress
- > **Make faster, more informed decisions**
Live video from the scene lets you prioritize and take immediate actions

✓ Respond better

- > **Ensure coordinated response**
Achieve quicker deployment with predefined protocols according to incident type
- > **Deploy with optimized resources**
Make the best use of your field resources and improve their safety with up-to-date information
- > **Maximize the chances of immediate arrest**
Boost response efficiency by quickly providing visual information to all stakeholders involved

✓ Resolve more effectively

- > **Acquire visual evidence faster**
Prepare an effective case with efficient tools for locating and managing video evidence
- > **Bring submissible evidence to court**
Maximize conviction rates with high-quality video

Connected video solutions – how do they work?

A clear view for everyone <

Cameras in prioritized locations serve as extra eyes for your operations center staff, providing high-definition live and recorded video. Intelligent functions in selected cameras automatically detect and alert for threats and incidents.

> Detering sound and light

Connected loudspeakers and lights help to deter potential incidents and prevent situations from escalating. They can be triggered automatically by sensor and video alerts, or managed from the operations center.

Operations center, dispatch center or real-time crime center <

Whatever the name, this is the operational hub, connecting all devices and stakeholders. Predefined incident protocols, combined with real-time data, ensure comprehensive situational awareness and operational efficiency – from crime scene to conviction.

Alerts from connected sensors <

Various sensors, including public emergency phones and buttons, provide early warnings of potential or confirmed incidents such as robbery, trespassing, gunshots, burglaries, flooding and fires.

> Field resources – armed with information

First responders equipped with mobile devices benefit from the latest relevant information, such as live surveillance video, images of suspects or license plate numbers. When approaching the scene, they are as prepared as possible, knowing what to expect – and what or whom to look for.
