Key benefits of an intrusion protection solution.

Learn more: www.axis.com/intrusion-protection

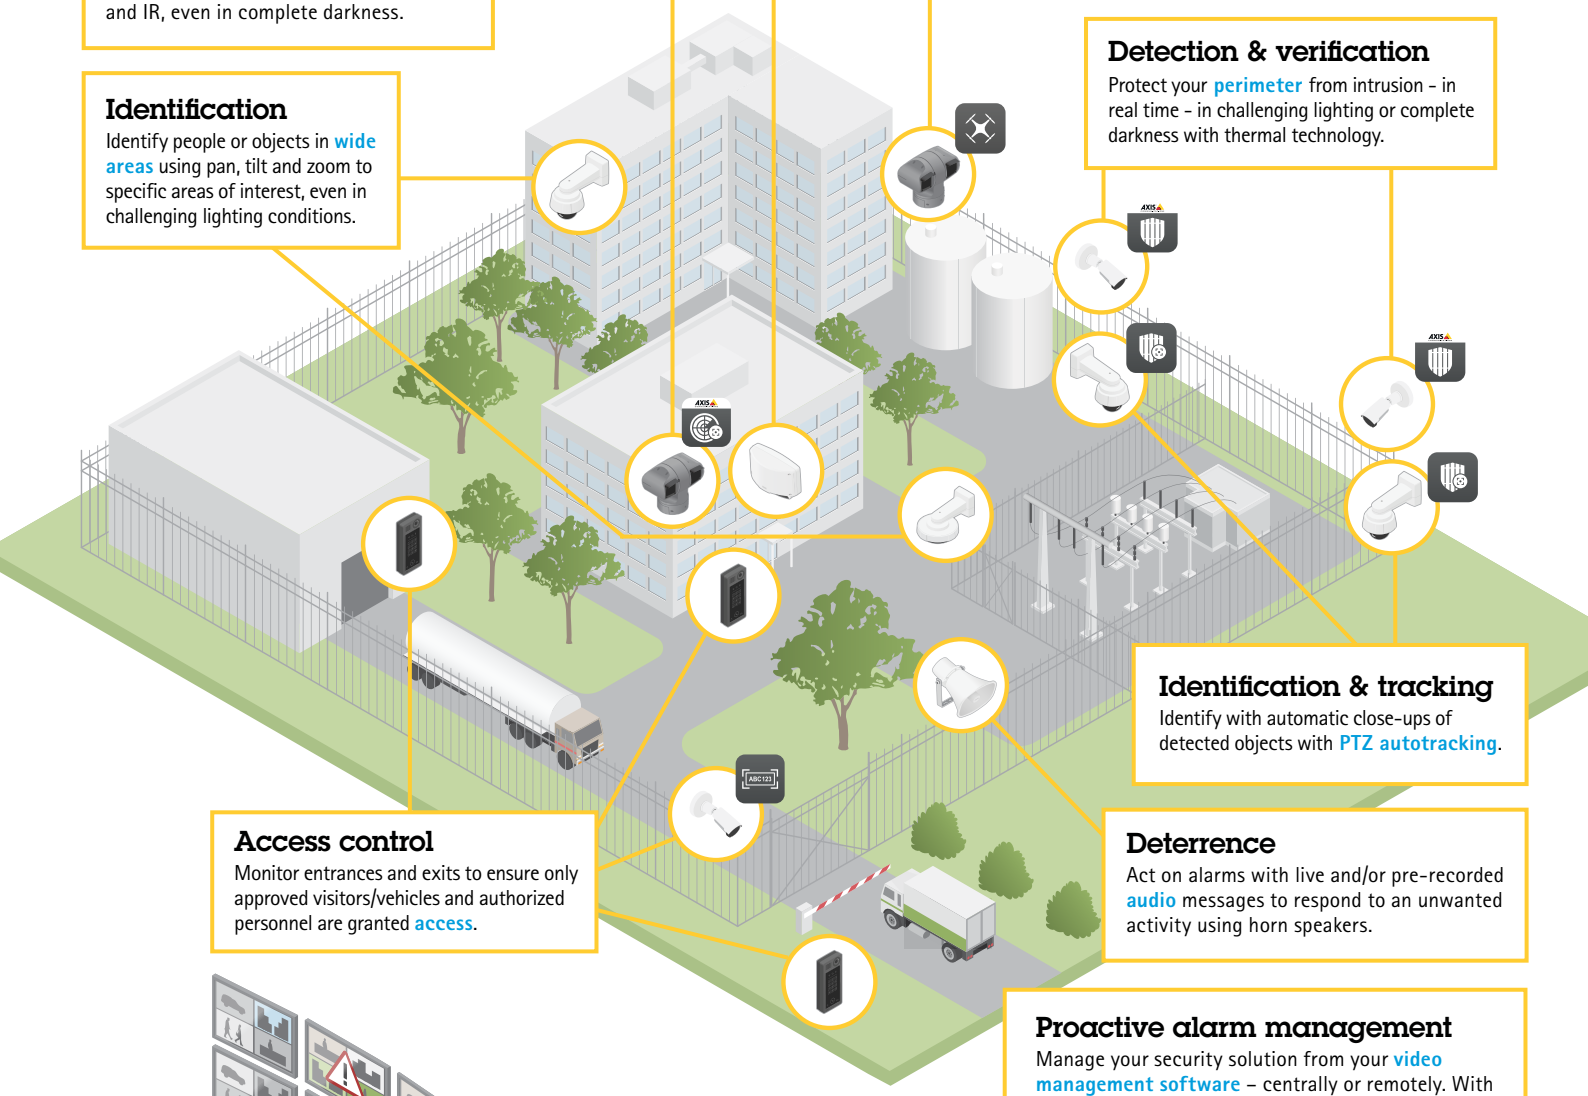

Detection & tracking
Protect your **area** from unwanted activity and track people or objects' distance, angle of movement and speed with **radar**.

Identification & tracking
Identify with automatic close-ups of radar detected objects with **PTZ autotracking** and IR, even in complete darkness.

Identification & tracking
Protect your **airspace** with drone detection, by identifying and tracking, using pan, tilt and zoom.

Identification
Identify people or objects in **wide areas** using pan, tilt and zoom to specific areas of interest, even in challenging lighting conditions.

Detection & verification
Protect your **perimeter** from intrusion - in real time - in challenging lighting or complete darkness with thermal technology.

Identification & tracking
Identify with automatic close-ups of detected objects with **PTZ autotracking**.

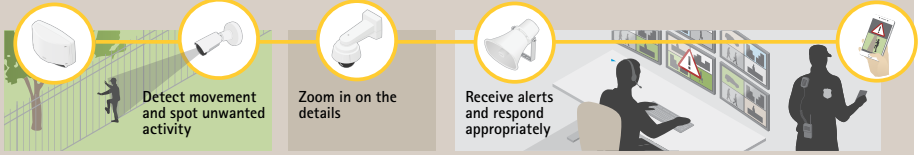

Access control
Monitor entrances and exits to ensure only approved visitors/vehicles and authorized personnel are granted **access**.

Deterrence
Act on alarms with live and/or pre-recorded **audio** messages to respond to an unwanted activity using horn speakers.

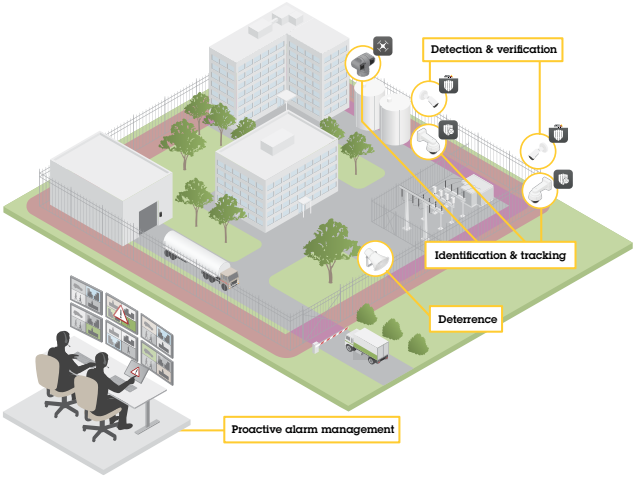

Proactive alarm management
Manage your security solution from your **video management software** – centrally or remotely. With the power of **analytics**, you will be able to receive and respond to alerts and ensure your site remains safe.

For a **fully optimized security solution**, all components should **work together** to immediately alert you of security breaches.

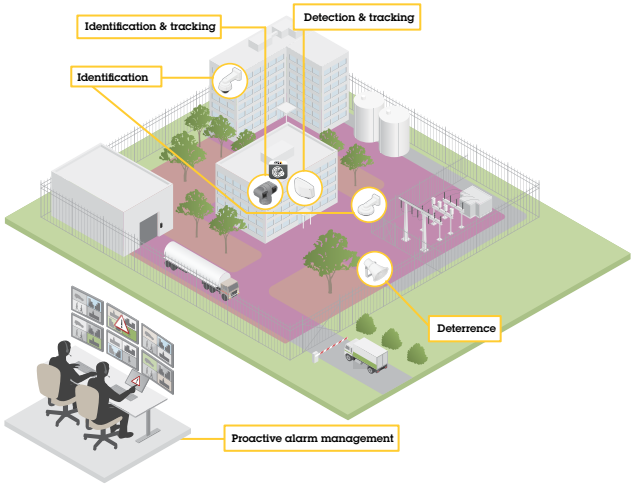

From perimeter to critical core – protecting the heart of your operations.

Incidents at critical facilities such as power plants, oil rigs or mines can lead to production disruption and safety hazards. Intrusion protection with early detection and verification can help ensure your facility runs as smooth as possible. Effective intrusion protection depends on depth. On layer-upon-layer of protection with critical operations at its heart. And at each and every layer, the measure of an organization's success depends on its ability to effectively handle alarms by assessing the validity of a threat – and act swiftly. With an Axis solution, all this can be handled from a remote location, anywhere, anytime.

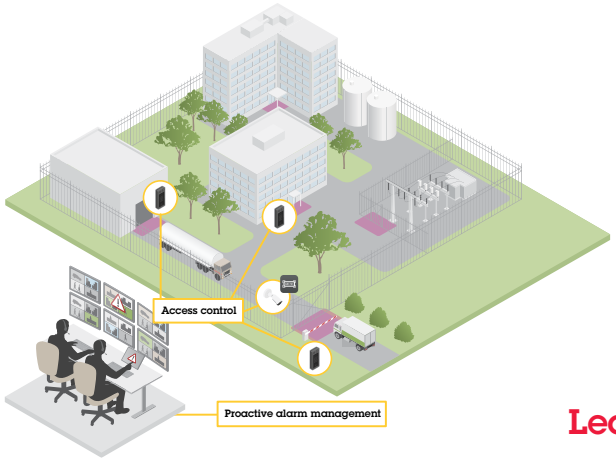

Perimeter protection

Detect and verify a potential intruder at your perimeter and in your airspace from virtually any location in real time. Put thermal and visual cameras to work for you, detecting, verifying and identifying potential intruders. Track the intruders by enabling a PTZ camera to automatically zoom-in on and follow detected objects. Our surveillance systems are designed to function even in challenging lighting or total darkness. Smart analytics trigger warnings and alert your staff, saving time and money spent on routine patrols and attending to false alarms. Warnings can also set off a live or prerecorded announcement to deter intruders away.

Area protection

Detect and verify any unwanted activity and track people or vehicles across multiple sites, with radar providing information about their speed, distance and angle of movement. Even in complete darkness. Identify objects across wide areas using multidirectional cameras with 360 coverage or pan, tilt and zoom cameras with IR to observe specific areas of interest. Act on alarms with live or prerecorded audio messages to deter unwanted activity.

Access control

Monitor entrances and exits to ensure only authorized personnel and approved visitors and vehicles are granted access, and safeguard potentially hazardous areas. A site, a building, a room within it, or a cabinet in that room. Axis access control solutions can take you past traditional door scenarios and deliver flexible and cost-effective security on many levels, for both people and vehicles.
