## Detect, Observe, Recognize, Identify (DORI)

### 10 mm lens

|           | DORI definition     | Distance (wide) | Distance (tele) |
|-----------|---------------------|-----------------|-----------------|
| Detect    | 25 px/m (8 px/ft)   | 65 m (213 ft)   | 141 m (463 ft)  |
| Observe   | 63 px/m (19 px/ft)  | 26 m (85 ft)    | 56 m (184 ft)   |
| Recognize | 125 px/m (38 px/ft) | 13 m (43 ft)    | 28 m (92 ft)    |
| Identify  | 250 px/m (76 px/ft) | 6.4 m (21 ft)   | 14 m (46 ft)    |

### 51 mm lens

|           | DORI definition     | Distance (wide) | Distance (tele) |
|-----------|---------------------|-----------------|-----------------|
| Detect    | 25 px/m (8 px/ft)   | 183 m (600 ft)  | 698 m (2290 ft) |
| Observe   | 63 px/m (19 px/ft)  | 73 m (240 ft)   | 277 m (909 ft)  |
| Recognize | 125 px/m (38 px/ft) | 37 m (121 ft)   | 140 m (459 ft)  |
| Identify  | 250 px/m (76 px/ft) | 18 m (59 ft)    | 70 m (230 ft)   |

The DORI values are calculated using pixel densities for different use cases as recommended by the EN-62676-4 standard. The calculations use the center of the image as the reference point and consider lens distortion. The possibility to recognize or identify a person or object depends on factors such as object motion, video compression, lighting conditions, and camera focus. Use margins when planning. The pixel density varies across the image, and the calculated values can differ from the distances in the real world.

## Highlighted capabilities

### AXIS Object Analytics

AXIS Object Analytics is a preinstalled, multifeatured video analytics that detects and classifies humans, vehicles, and types of vehicles. Thanks to AI-based algorithms and behavioral conditions, it analyzes the scene and their spatial behavior within – all tailored to your specific needs. Scalable and edge-based, it requires minimum effort to set up and supports various scenarios running simultaneously.

### AXIS Live Privacy Shield

Remotely monitor activities both indoors and outdoors while safeguarding privacy in real-time.

With AI-based dynamic masking you can choose what to mask or blur while addressing rules and regulations protecting privacy and personal data. The application enables masking of moving and still objects such as humans, license plates, or backgrounds. The application works in real-time and on both live and recorded video streams.

### Axis Edge Vault

Axis Edge Vault is the hardware-based cybersecurity platform that safeguards the Axis device. It forms the foundation that all secure operations depend on and offer features to protect the device's identity, safeguard its integrity and protect sensitive information from unauthorized access. For instance, **secure boot** ensures that a device can boot only with **signed OS**, which prevents physical supply chain tampering. With signed OS, the device is also able to validate new device software before accepting to install it. And the **secure keystore** is the critical building-block for protecting cryptographic information used for secure communication (IEEE 802.1X, HTTPS, Axis device ID, access control keys etc.) against malicious extraction in the event of a security breach. The secure keystore and secure connections are provided through a Common Criteria or FIPS 140 certified hardware-based cryptographic computing module.

Furthermore, signed video ensures that video evidence can be verified as untampered. Each camera uses its unique video signing key, which is securely stored in the secure keystore, to add a signature into the video stream allowing video to be traced back to the Axis camera from where it originated.

To read more about Axis Edge Vault, go to [axis.com/solutions/edge-vault](https://axis.com/solutions/edge-vault).

### Electronic image stabilization

Electronic image stabilization (EIS) provides smooth video in situations where a camera is subject to vibrations. Built-in gyroscopic sensors continuously

detect the camera's movements and vibrations, and they automatically adjust the frame to ensure you always capture the details you need. Electronic image stabilization relies on different algorithms for modeling camera motion, which are used to correct the images.

### OptimizedIR

Axis OptimizedIR provides a unique and powerful combination of camera intelligence and sophisticated LED technology, resulting in our most advanced camera-integrated IR solutions for complete darkness. In our pan-tilt-zoom (PTZ) cameras with OptimizedIR, the IR beam automatically adapts and becomes wider or narrower as the camera zooms in and out to make sure that the entire field of view is always evenly illuminated.
