AXIS Client for Unified Communication Systems

Smooth cloud-based workflows and easy configuration

Directly integrated with Microsoft® Teams, this unified communication system combines physical devices with virtual communication platforms. With smooth cloud-based workflows across multiple platforms, it offers an efficient way to handle and set up audio calls and callouts. And there's no need to install separate applications on your desk phones, mobile devices, and PCs. It's simple and quick to install and offers straightforward guided configuration. Remote health monitoring notifies you whenever there's an issue. And end-to-end data encryption ensures secure communication. What's more, with an extended 5-year warranty and AXIS OS LTS track, you can always rely on Axis for peace of mind.

> **Enhanced communication experiences**
> **Grant access through Microsoft Teams**
> **Easy to set up and configure**
