

# AXIS Q8752-E Mk II Bispectral PTZ Camera

# Thermal detection and visual verification

This bispectral camera offers reliable thermal detection and visual verification. It features 360° infinite pan for fast repositioning and continuous tracking of objects. Electronic image stabilization (EIS) on both channels ensures smooth video. And Lightfinder 2.0 and Forensic WDR deliver true colors and great detail in near darkness or challenging light. Built on a powerful analytics platform, it's easy to add Axis and 3rd party analytics. It's possible to connect this camera using fiber optic cabling to overcome distance and bandwidth limitations.

#### **Power**

52-58 V DC, typical 25 W, max 185 W Power loss recovery<sup>6</sup> Surge protection 2kV, according to EN 61000-4-5

#### **Connectors**

Audio: 3.5 mm mic/line in

I/O: 6-pin 2.5 mm terminal block for 4 configurable

inputs/outputs

Network: Shielded RJ45 10BASE-T/100BASE-TX/ 1000BASE-T, SFP slot (SFP module not included)

Power: DC input, terminal block

Illumination (in upper part of positioning unit)

### Storage

Support for microSD/microSDHC/microSDXC card Support for SD card encryption (AES-XTS-Plain64 256bit)

Recording to network-attached storage (NAS) For SD card and NAS recommendations see axis.com

### **Operating conditions**

-40 °C to 60 °C (-40 °F to 140 °F)

Maximum temperature according to NEMA TS 2 (2.2.7): 74 C (165 F)

Start-up temperature: -40 °C (-40 °F) Humidity 10-100% RH (condensing)

Wind load when PTZ operational

37 m/s (83 mph)<sup>8</sup>, 45 m/s (100 mph) without weathershield

With AXIS PT IR Illuminator Kit C: 40 m/s (90 mph), 52 m/s (116 mph) without weathershield

Maximum effective projected area (EPA): 0.121 m<sup>2</sup>

### Storage conditions

Temperature: -40 °C to 65 °C (-40 °F to 149 °F) Humidity: 5-95% RH (non-condensing)

#### **Dimensions**

### **Electronic image stabilization**

Electronic image stabilization (EIS) provides smooth video in situations where a camera is subject to vibrations. Built-in gyroscopic sensors continuously detect the camera's movements and vibrations, and they automatically adjust the frame to ensure you always capture the details you need. Electronic image stabilization relies on different algorithms for modeling camera motion, which are used to correct the images.

### Lightfinder

The Axis Lightfinder technology delivers high-resolution, full-color video with a minimum of motion blur even in near darkness. Because it strips away noise, Lightfinder makes dark areas in a scene visible and captures details in very low light. Cameras with Lightfinder discern color in low light better than the human eye. In surveillance, color may be the critical factor to identify a person, an object, or a vehicle.

### Forensic WDR

Axis cameras with wide dynamic range (WDR) technology make the difference between seeing important forensic details clearly and seeing nothing but a blur in challenging light conditions. The difference between the darkest and the brightest spots can spell trouble for image usability and clarity. Forensic WDR effectively reduces visible noise and artifacts to deliver video tuned for maximal forensic usability.

### Thermal palettes

A mode that allows the user to select a color range to show relative temperature differences in a scene. The user can choose between black-and-white ranges, color ranges, or a mix between the two. The same input (measured thermal radiation) can result in different visual appearance depending on how each pixel value is mapped to a color range.

#### Zipstream

The Axis Zipstream technology preserves all the important forensic in the video stream while lowering bandwidth and storage requirements by an average of 50%. Zipstream also includes three intelligent algorithms, which ensure that relevant forensic information is identified, recorded, and sent in full resolution and frame rate.
