

AXIS Body Worn Live

Right there with you

AXIS Body Worn Live streams live video, audio and metadata from Axis body worn cameras. Let Axis host it for you or host it yourself if cloud-based hosting isn't an option for your organization. It is secure and reliable, it supports informed decision making by operators and provides an added sense of safety for the camera wearers. AXIS Body Worn Live has several layers of security, and the transmission is protected by full end-to-end encryption, ensuring that the customer owns their encryption keys. Being a web-based application it's compatible with PCs, tablets and Android mobile devices and with the self-hosted option it is integrated directly in your preferred VMS.

Cybersecurity

Security

Axis-hosted:

End-to-end encryption: XChaCha20-Poly1305, X25519 and XSalsa20

Encryption at rest: AES-256 bit

Encryption in transit: TLSv1.2 or later with 256 bit ciphers

Self-hosted:

Encryption in transit: TLSv1.2 or later, dTLS 1.0 or later, SRTP

Video

Video compression

H.264 (MPEG-4 Part 10/AVC) Baseline, Main and High Profiles

640x360 @ 25/30 fps

Bandwidth requirements: up to 8 Mbit/s

Resolution

1280x720 to 640x360

Frame rate

25/30 fps with power line frequency 50/60 Hz

Audio

Encoding

Axis-hosted:

AAC

Self-hosted:

AAC, Opus

Capabilities

Functionality

Axis-hosted:

- Live stream triggers: Camera button
 - Stream gap retrieval
 - Priority upload of latest data
 - Pre-buffer
 - Multiple clients can view the same stream
 - Acknowledge stream
- #### Self-hosted:
- Depends on VMS integration

Recording playback

Axis-hosted:

- Access to recent streams for 24 hours
- Multiple simultaneous streams
- Time line scrubbing in live stream
- Go to live
- Audio mute

Self-hosted:

- Depends on VMS integration

Positioning system

Axis-hosted:

- Location data through GNSS
