

SEAMLESS INTEGRATION

Expand your Axis access control system with Aperio wireless locks

The integration between ASSA ABLOY Aperio wireless lock technology and AXIS Camera Station Secure Entry provides you with the flexibility to add access control features to almost every opening in any environment.

Using the powerful Axis versatile and edge-based network door controllers integrated with Aperio battery-powered locks, enables an easy to manage – and efficient access control solution.

As a result, security and facility managers now have greater control, can easily respond to organizational changes and only need to monitor a single security system, while users only require a single RFID access control card.

Aperio integration is proudly supported by

ASSA ABLOY

AXIS
COMMUNICATIONS

Add Axis access control to all your openings – it is wireless and cost-effective.

No matter the door type; with AXIS Camera Station Secure Entry you can integrate even glass doors, server racks, or cabinets into your access control system.

AXIS Camera Station Secure Entry provides easy-to-manage access and trouble-free security management of your facility site. The software integrates efficient video surveillance with access control, so operators can monitor both video and access in the same system.

With a user-friendly interface, it's easy to add or remove users with drag and drop operation. You can set up access rules based on specific criteria such as cardholder, location, and schedule.

An integrated approach means you only need to maintain one platform. This lowers costs and increases userfriendliness.

You have just one software system that allows you to add and manage Aperio hardware, now and in the future, offering real added value. Aperio escutcheons, cylinders, locks and handles are cost-effective extensions of Axis' established access control system, enabling a greater number of doors to be controlled.

Two of a kind – Aperio and Axis

Aperio battery-powered locks integrate seamlessly with AXIS Camera Station Secure Entry – adds another dimension of flexibility and security to our all-in-one video and access control management system.

Easy to install

Without cabling the door and in most cases, without even drilling.

Cost-effective

Aperio battery-powered devices save energy and installation costs. Not to mention the cost of lost keys.

Seamless access control

Up to 16 wireless doors supported per Axis door controller via Aperio RS485 communication hub, and one additional wired door can be added.
