

Choose the right audio management software for your business

Our audio management software lets you manage and control your audio systems - no matter how complex they are. From a single user interface, you have full control of your network audio system for everything from installation to daily operations.

It scales from small local sites to large multisite enterprises.

Features of Axis audio management software

Axis audio manager software offers you an easy way to manage your audio management system, helping ensure your message reaches the right target group, at the right time. All tailored to your specific needs.

Content management
Play background music and live or pre-recorded messages

Content prioritization
Prioritize content and ensure urgent messages interrupt the schedule

Scheduling
Schedule when and where to play specific content

Health monitoring
Discover system errors

Zone management
Divide your site into zones and play content of your choice in one or more zones

User management and access control
Control who has access to what features

Is your business expanding?

Do you need to change your network audio zones or scheduling? Quickly update your settings in the software and ensure you always play the right content, at the right time, and in the right locations. You can even make these changes remotely, in real-time, without downtime or the need to go on site, regardless of whether you have a single or multiple sites.
