

# Higher education: Think bigger.

One network solution for safety and security, efficiency, and the student experience.

A single network solution from Axis enables a proactive approach and easy access to actionable insights to help you address multiple priorities in higher education. Safer, more secure campuses. An efficient day-to-day. And an excellent student experience. Read on to learn how intelligent, cost-effective network solutions can help diverse stakeholders on your campus accomplish more.

## Challenges we help you solve

**Security:** Campuses are often physically large and complex, with significant daily traffic, making it difficult to prevent and swiftly address unauthorized presence or unwanted behaviors.

**Safety:** A proactive approach to safety is key. And when the unexpected happens, such as a student collapsing on a treadmill or smoke forming in your power plant, responding quickly saves lives.

**Efficiency:** To provide a seamless experience for visitors and the campus community – especially when resources are limited – working smarter is more important than ever.

**The student experience:** Students are seeking schools that offer increased flexibility and unique opportunities, both inside and outside the classroom.

# Featured use cases

## Security and safety

Respond rapidly and proportionally to real-time situations. Protect human life, campus assets, and your institution's reputation with a smart, proactive approach to safety and security.

## Efficiency

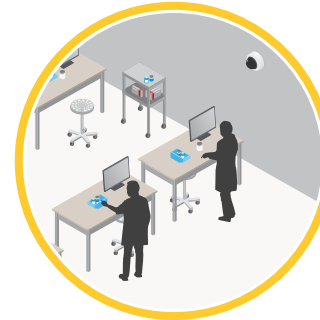

Allocate staff intelligently, stay alert to and manage traffic surges at events or facilities, and automate tasks like access control and visitor management.

## Student experience

Set students up to achieve more, engage in richer learning, optimize their schedules, and reach a global audience – without adding staff.

Access control

Hands-on training

Emergency calls

Visitor management
