How smart security solutions protect your business.

With an Axis end-to-end surveillance solution, you can rest easy. Regardless of your business needs, you're well-protected against intruders, break-ins, vandalism, and anything else coming at you. Plus your life as a business owner becomes easier in several smart ways.

"End-to-end" means you buy a complete security system tailored to your specific needs from Axis. It can include both cameras and other networked security devices – all watching over your premises, day and night. And all thoroughly tested and validated by Axis for reliable operation.

At the heart of the system, the Axis video management software coordinates the operation of all other components and makes them easy to use.

World-renowned Axis network surveillence cameras come in a wide variety of versions: Fixed outdoor cameras, discrete dome cameras, panoramic cameras, positioning cameras that follow an unwanted activity – even thermal cameras that can see in complete darkness. They will all see what needs to be seen.

Loudspeakers in the network help deter intruders by addressing them with live or pre-recorded audio messages.

Network intercoms at entrances let you identify and communicate with visitors audio-visually, leaving you in full control of access to your premises.

A powerful recorder, with advanced software, acts as the mastermind of your system. It captures and stores all video and audio activity of interest to you for live or subsequent review – from your phone, tablet or laptop.
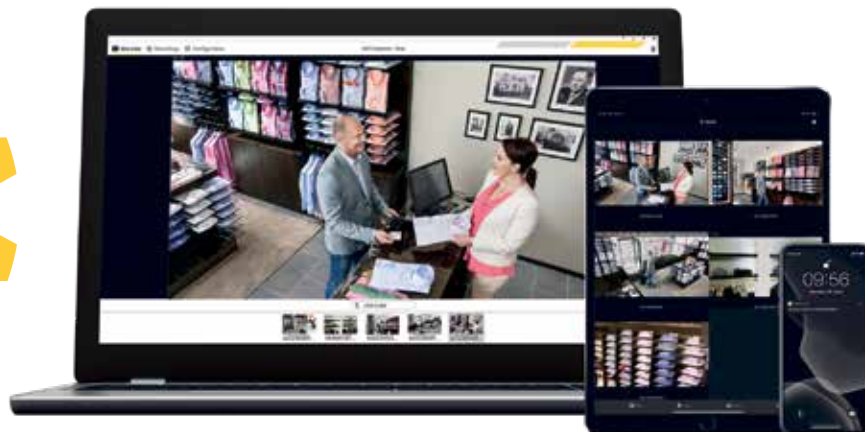

And Axis analytics applications help cameras differentiate between bad and benign activities around your premises – and determine whether or not to record what's going on and alert you. They can even read and interpret license plates on vehicles.

All in all, your Axis end-to-end surveillance solution will keep your business protected – no matter what. And you're free to combine the various components as you see fit, today and in the future. As you grow, or your needs change, so will your system.

AXIS Companion

AXIS Companion video management software is simple to set up and even simpler to use. Available at any time, from anywhere makes it the ideal network surveillance solution regardless of your current needs and challenges.

With AXIS Companion you get access to the broad portfolio of Axis' network cameras, network audio devices as well as intercoms from Axis, so you can solve most surveillance challenges with either a single- or multi-site surveillance system.

The core of the system is AXIS Companion video management software, which is designed to support up to 16 cameras/devices per site. There are no licensing fees or costs to download and use the software. Setting up storage in an AXIS Companion system is easy and flexible.

AXIS Companion video management software offers a tight integration of network cameras, audio and intercoms to ensure you will get the most out of your surveillance system. Our solutions are easily adapted to your business, and seamlessly expand with your needs.

Easy to install, operate, maintain and expand. Naturally.

AXIS Camera Station

AXIS Camera Station is a powerful network surveillance and access control solution.

It's designed for a wide range of installations protecting, for example, retail stores, hotels, schools and manufacturing plants.

It gives you exactly the level of security you need in the form of a complete, flexible and scalable system.

If you decide later to add other IP-based security devices – network intercoms, door stations, audio devices, radar detection, or extend reach by adding more cameras or devices, it's very easily achieved.

You can also add sophisticated Axis analytics that significantly improve operator effectiveness.

AXIS Camera Station software is very powerful, with large capacity for cameras and other IP-based security devices, and it's just as easy and intuitive to use as AXIS Companion. Anyone can operate the system, view video feeds, manage access to your premises, handle incidents, and quickly export high definition evidence. The license model is simple and important features and functions are always included.

A surveillance solution that keeps up with your business.

Deciding whether to get AXIS Companion or AXIS Camera Station as your end-to-end security solution is not only a matter of size. Even more important is what security issues you have and how they can be best addressed.
Do you require a single camera to protect your business – or many? Do you have a single location to protect – or several? Do you need cameras only – or a combination of cameras and other security devices? Do you need access control management to further enhance security? And what if your needs change? Axis makes the answers easy.

An Axis end-to-end solution can easily be adapted to your growing business and changing needs. This means you can start out with a basic system using AXIS Companion software with a few cameras and devices. And then seamlessly add more of them as you go.

Once your system reaches a certain size and complexity, you simply transition to the more powerful AXIS Camera Station software. No new cameras – it's a smooth move.

AXIS Camera Station requires a licensing fee. In return, you get all the power you'll need to continue to grow your system. Many more cameras can be connected and monitored, along with other IP-based devices, such as radar for detection, intercoms for communication with visitors, and to manage access and network speakers for deterring intruders.

When you install an Axis end-to-end surveillance solution, you know it will stay with you – grow and change with you – for many years to come.

Your choice of Axis network security products is virtually endless.

Network cameras

Whether your business needs the security of sturdy outdoor cameras, positioning cameras, discreet dome cameras for sensitive environments, thermal imaging cameras or panoramic cameras, there's an Axis network camera that meets your requirements.

Network intercoms

Axis network intercoms combine video surveillance, two-way communication and remote entry control in a single device. Ideal for entrances and exits, or spread out over a larger area, they help you to enable better overall security and improve business efficiency.

Access control

AXIS Camera Station Secure Entry combines video surveillance and access control management in one unified user-friendly interface, giving you new possibilities to enhance security. Operators have a complete overview of everything that's happening at the door so they can visually identify visitors or get automatic alerts in case of incidents.

Audio

With network speakers added to your surveillance system, you can further improve security. A remote audio solution lets you address people and deter unwanted activity around your premises – using live or pre-recorded callouts. It is also possible to play background music to enhance the atmosphere.

Recorders

Axis network video recorders are adapted to the wide range of Axis network security products. They're reliable, easy to install and come in different form factors and storage variants. The recorders are preloaded with all the necessary software.

Analytics

With Axis video analytics applications, your surveillance becomes proactive. They help your security staff protect your property. The applications can, for example, detect trespassers or loiterers and automatically notify a guard or play a message through loudspeakers. They also help reduce bandwidth and storage use by sending and recording only video that is of interest.

AXIS Site Designer

With AXIS Site Designer on your laptop or tablet, you can manage the whole design process effectively. You can make instant changes, use video resolution examples to select the right cameras, add camera names and retention times, find suitable accessories and the right recording solutions. You also get useful sales and installation documentation as well as the ability to export all configurations to AXIS Camera Station to avoid installation mistakes.

Business owners everywhere trust Axis for their security needs.

"A smarter safer world." This has been the guiding star for Axis ever since the company was founded back in 1984.

It was the birth of using network technology to connect devices and turn them intelligent – known today as the Internet of Things (IoT).

Applied to surveillance and security, this was a game-changer.

Business owners with an internet connection could now watch what was going on at their premises from anywhere in the world. And for those who already had a large CCTV system, Axis created network encoders so they, too, could use the latest IP technology.

Today, Axis has become the world's leading provider of network surveillance solutions for businesses of all types and sizes.

Cameras are, obviously, essential to surveillance. Axis offers a wide variety of them – outdoor cameras, positioning cameras, panoramic cameras, fixed dome cameras, thermal cameras, and many more.

But good security requires more. So in recent years, Axis has branched out to encompass video management software for video feeds, audio solutions for deterring intruders, and access control using audiovisual door stations.

All Axis solutions are based on open IP standards. This means that if you have complex surveillance needs that require an even more advanced and customized video management system one of our specialized partners can readily provide it for you. No need to replace any existing network of cameras and other devices.

Choosing an end-to-end surveillance solution from Axis is simply one of the safest investments you can make. Business owners around the world would agree.
