

Impact on warranty

Impact on warranty

This product is approved for repaint by Axis, provided that you follow the instructions in this document and at axis.com/warranty-implication-when-repainting.

Risks with repainting

There are several risks when disassembling or assembling an Axis product. There is always a certain yield loss during assembly. Training of operators and the use of correct tools mediates some of the problems but they can never be fully avoided. Some of the risks include:

ESD Damage – Always handle the product in an ESD safe environment. Even if precautions are taken there is always a risk of ESD damage. The damage can remain undetected and cause problems during the lifetime of the equipment.

Dust contamination – Opening a camera may expose the lens and sensor to dust or paint. Dust will affect the optical performance. Lenses need to be disassembled in a dust-free environment, preferably a cleanroom.

Paint overspray – Masking the different components of the equipment is critical. Failure to mask sensitive areas can cause problems with assembling the equipment. Any areas that are not painted at factory or have a different surface treatment than the rest of the parts (threads, ground and electrical contact surfaces) must also be masked to ensure function.

Repaint the product

Repaint the product

Preparations

- If applicable, disassemble the device according to the instructions in this document.
- Clean all parts to be repainted thoroughly to remove grease, dust, or oil.
- To ensure reassembly and functionality of the product, mask any openings (for example for screws, LED indicators, or microphones) before you paint.

Pretreatment of parts

Depending on the part material and type of paint applied at factory, different pretreatment should be done for the new paint to adhere as well as possible. Clean the parts properly to remove oil, grease and dust.

For more information on the materials used in the product, see its datasheet at axis.com.

Powder coated parts – Use a primer. Alternatively, remove the original powder coating down to the base material, using fine sandpaper, and clean the parts before painting.

Anodised and chromated parts - Use a primer.

Uncoated stainless steel - No special pretreatment is needed, but make sure that the surface is clean before painting.

Plastic - Use a primer.

Materials used in this product

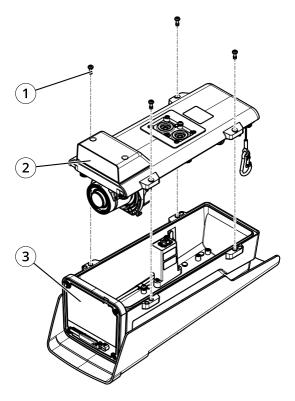

- The weathershield is plastic.
- The rest of the product is powder coated.

Disassembly

Disassemble the housing

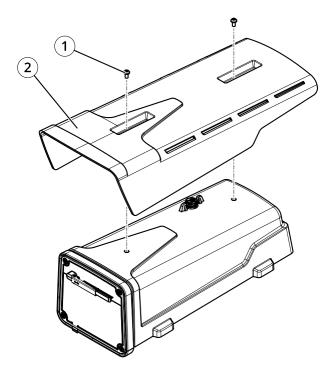

1. Remove the screws and the top cover from the bottom chassis.

Repaint the product

- Screw T20 (4x) Bottom chassis
- Top cover
- 2. Remove the screws and the weathershield.

Repaint the product

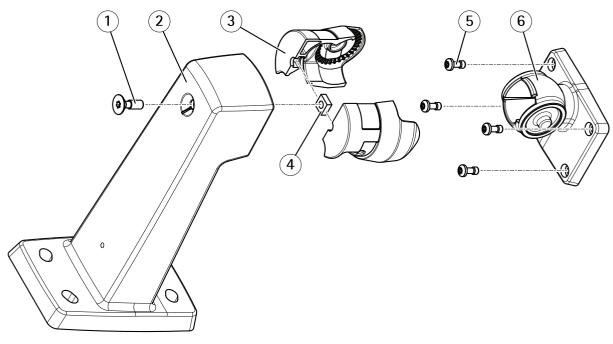

- Screw T20 (2x) Weathershield

Disassemble the wall mount bracket

- 1. Remove the screw at the bottom of the arm.
- 2. Separate the socket and the sugare nut.
- 3. Remove the four screws from the ball joint.

Repaint the product

- 1 Screw T30
- 2 Arm
- 3 Socket
- 4 Square nut
- 5 Screw T20 (4x)
- 6 Ball joint

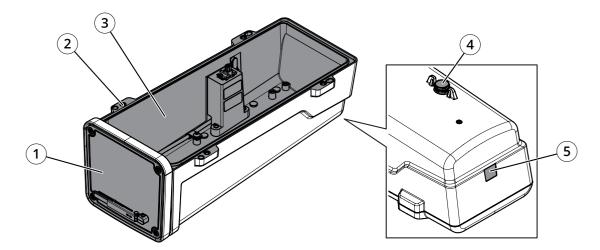

Masking

Masking the top cover

Mask the following parts of the top cover:

- 1. The front window including the black areas.
- 2. The screw holes.
- 3. Everything on the inside.
- 4. The vent membrane.
- 5. The label.

Repaint the product

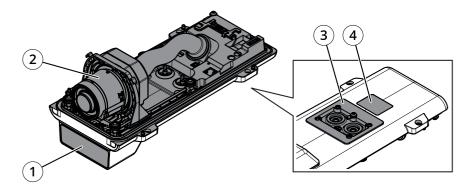

- 1 Front window
- 2 Screw holes (4x)
- 3 Inside
- 4 Vent membrane
- 5 Label

Masking the bottom chassis

Mask the following parts of the bottom chassis:

- 1. The Illuminator front glass.
- 2. Everything on the top side of the bottom chassis, including the gasket and the four screw holes.
- 3. The surface under the adapter for the wall mount.
- 4. The product label.
- 5. The four screw holes.

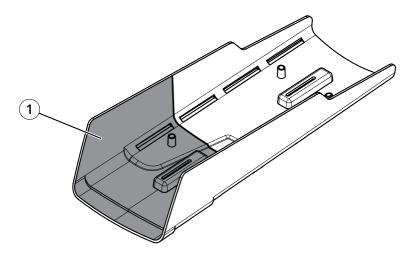

- 1 Illuminator front glass
- 2 Top side
- 3 Wall mount surface
- 4 Label

Masking the weathershield

Mask the black part of the weathershield.

Repaint the product

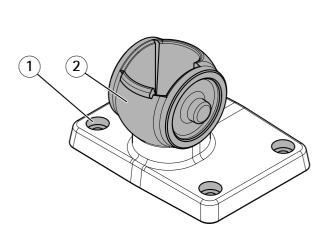

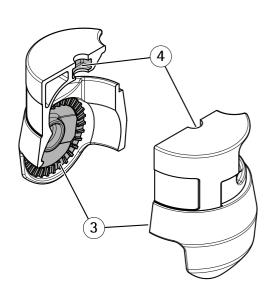

1 Black

Masking the wall mount bracket

Mask the following parts:

- 1. The four screw holes
- 2. The ball joint.
- 3. The socket teeth.
- 4. The slot for the square nut.

- 1 Screw hole (4x)
- 2 Ball joint
- 3 Socket teeth
- 4 Slot

Repainting

1. Apply a thin and even layer of spray paint according to the instructions of the paint manufacturer.

Repaint the product

- 2. Let the paint dry.
- 3. To get a better coverage and clearer color, apply a second layer of spray paint.
- 4. When the paint is dry, remove the masking and reassemble the product.

Reassembly

Reassemble the product.
