Highlighted capabilities

AXIS Live Privacy Shield

Remotely monitor activities both indoors and outdoors while safeguarding privacy in real-time.

With AI-based dynamic masking you can choose what to mask or blur while addressing rules and regulations protecting privacy and personal data. The application enables masking of moving and still objects such as humans, license plates, or backgrounds. The application works in real-time and on both live and recorded video streams.

LEDs can be used separately or together and can be switched off for more discrete monitoring.

For more information, see axis.com/glossary

AXIS Object Analytics

AXIS Object Analytics is a preinstalled, multifeatured video analytics that detects and classifies humans, vehicles, and types of vehicles. Thanks to AI-based algorithms and behavioral conditions, it analyzes the scene and their spatial behavior within – all tailored to your specific needs. Scalable and edge-based, it requires minimum effort to set up and supports various scenarios running simultaneously.

Chemical resistant casing

In some environments where hygiene requirements are rigorous, cleaning the exterior of the surveillance camera could be required daily or even several times a day. The recommended cleaning procedure involves chemical wipedowns using a soft cloth with specific chemical solutions such as cleansers or disinfectants. The chemical resistance of the casing has been verified through two types of in-house testing: environmental stress crack resistance testing and cleaning simulations.

Coughing fit and stressed voice detection

Coughing fit and stressed voice detection are two audio analytic applications that detect incidents by listening to the surrounding audio 24/7. The audio analytics consists of two separate detection algorithms, and you can choose to use one of them, or both. The cough detector detects single coughs or coughing fits. The stressed voice detector identifies sound patterns associated with duress, anger, or fear.

Echo cancellation

Devices with echo cancellation can recognize sounds that the built-in loudspeaker produces as echoes and remove them.

LED indicators

LED indicators are used to signal different functionalities to the close environment. The LEDs help to improve safety, security, and operational efficiency and at the same time safeguards privacy. A LED indicator can for instance help protect privacy by letting you know when the camera is recording or when audio is being used. The
