

Real Time Crime Centers

Get the full picture

Intelligent Axis solutions for law enforcement

Real-time information. Real-world impact.

In today's cities, police increasingly face challenges and threats that are more numerous, more sophisticated, and more difficult to track. Real Time Crime Centers (RTCCs) break down information silos to coordinate and support the crucial efforts of police and other first responders.

How it works

As part of an RTCC, Axis cameras, radar, audio equipment, and intelligent analytics enable real-time situational awareness and provide easy access to actionable insights. That means you have the intelligence you need to allocate resources, investigate efficiently, and act decisively – protecting your officers and your community.

The difference it makes

- Know what's happening
- Deploy the right resources – faster
- Deter and mitigate crimes and public safety incidents
- Identify trends and patterns with deep-learning analytics
- Investigate efficiently with high-quality images and metadata
- Integrate with best-in-class third-party solutions such as VMS, geospatial and mapping software, intel and dispatching platforms, gunshot detection, and more

The intelligent solutions in an RTCC are a force multiplier, helping your officers accomplish even more.

Spotlight on solutions

Customer stories

Hartford, Connecticut

442%

The increase in solvability when a homicide or shooting case has a video component

“Motor vehicles have become the nexus of our gun violence investigations. You might not capture the incident, but if you capture the suspect’s vehicle and put out a BOLO, there’s a good chance you can stop the car and identify the operator, oftentimes with the weapon.”

Sgt. Chris Mastroianni
RTCC, Hartford Police Department

70%

The percent of solved homicide and shooting cases that had associated video

Atlanta, Georgia

“With the great images we get from the city’s Axis cameras and all the video evidence we’ve collected from community-contributed cameras...we’ve been able to jump on emergencies faster. We’ve also seen a significant drop in crime and an increase in conviction rates.”

Greg McNiff, Vice President of Programs
Atlanta Police Foundation

New Orleans, Louisiana

“We’ve got a police department less than 1,500 strong. Yet we’re more successful at mounting large events than other cities because we’re leveraging technology to get ahead of problems and help our officers work smarter and more effectively.”

Ross Bourgeois, Director of Public Safety Support
New Orleans Office of Public Safety and Homeland Security

Why Axis for RTCCs?

- High-quality, robust, dependable products that deliver clear images – even in tough conditions
- Cybersecurity in focus, from design through decommissioning
- Flexible and scalable solutions, so you're always free to grow and add new functionality
- An open platform, easy integration, and massive partner ecosystem, so you can build the solution you need
- World-class global and local support, no matter where you are
- Transparent and competitive total cost of ownership
