

Body worn solutions.

From the leader in network video.

For law enforcement agencies

AXIS[®]
COMMUNICATIONS

Made for all your department's needs

In the 30 years since Axis Communications invented the network camera, we have worked with thousands of municipalities across the globe as they incorporated network video into their public safety strategy. The ease of use and reliability of our products in addition to our ecosystem partner approach to serving our clients are cornerstones that have led to Axis Communications becoming the worldwide leader in network video – innovating for a smarter, safer, world.

Today, we bring our expertise in ruggedized hardware engineering, ease-of-use design, open standards compliance and functionality, image processing, privacy, cybersecurity, and data integrity to law enforcement agencies in the form of the market's most flexible body worn solution.

Your agency deserves choice. This includes choice on data retention and storage. Satisfying social demand and legislative mandates for more usage of body worn cameras should not force your agency into a spiraling cost center for data management and storage.

Your agency deserves reliability. Law enforcement officers enter the most demanding situations and – regardless of the stress of the environment – are expected to perform their duty with integrity and consistency. The equipment we provide them to perform their job should be held to the same standard. Every aspect of the Axis body worn solution is purposefully engineered to be rugged, reliable, consistent, and unobtrusive to the officer's ability to perform their job.

Your agency deserves value. A product is only as good as the benefit it yields. The Axis body worn solution is designed to provide your agency, its officers, and the community at large, the benefit of the most usable video and audio to document interactions between officers and the general public. Our history of engineering best-in-class imaging products will serve all parties well, while our network technology background and partner ecosystem will allow you to make the best decisions for your agency while managing every aspect of your total cost of ownership.

Read on to learn why the Axis body worn solution is the right choice for your agency and your community...

Made for easy integration

Axis body worn solutions let you decide how best to make use of our proven technology and top-quality software. They're flexible, cost-effective, designed to work with the systems you already have in place, and to live up to the challenges you face.

Made for officers

Deter, document, and provide a sense of safety and security throughout your officers' working day. From sunup to sundown and into the night, Axis body worn solutions keep right on working and making the job easier in every situation.

Made for forensic value

You can count on Axis body worn cameras to record incidents as they appeared to the wearer, and as they sounded. You get sharp audio and video you can use in investigations, for training, and in court.

Open platform for maximum flexibility

Our body worn solutions are built on an open platform so you decide what's best for you. Integration with your existing system or installation of a completely new system are both easy.

Global partner network for easy integration

Our body worn solutions are distributed and integrated through an extensive network of Axis partners. This means support for building a customized system – from advice, to integration, to training, to future system upgrades – is always nearby.

Secure system you can trust

Our body worn solutions support FBI cybersecurity standards with end-to-end encryption that includes video files.

Made for easy integration

Open technology makes Axis body worn solutions all about choice – and we can help you make the best decision for your needs. Our solutions are distributed and integrated through an extensive network of local Axis partners. They'll assist you in finding the best solution for your purposes by walking you through all your many options. They'll help you compare an all-Axis system with alternatives that include management systems and software you're already using, or simply prefer. Wherever you are, you'll find an Axis partner nearby to help with purchasing decisions, system integration, training, and ongoing support.

“With Axis body worn solutions, you have the ability to work with your local systems integrator for everything from purchase and integration to service and support.”

Steven Jussaume, Solutions Engineer, Axis Communications

Onsite or in the cloud?

Need a 100% onsite system with low one-time licensing costs? No problem. Want a cloud-based system that includes hardware and software that's managed by Axis? You can have it. And if your needs change down the line, our systems change – and grow – with you.

Manage evidence your way

Not only is where you store your data up to you, how you manage it is yours to decide, too. Our video management system (VMS), AXIS Camera Station Pro, is a great choice if you want to integrate your body worn system with other Axis security solutions – either on-premises or in the cloud. You can also choose a VMS or evidence management system (EMS) from your preferred third party, such as one of our validated software partners, or continue using your existing VMS or EMS.

Flexible and scalable

Axis body worn systems are scalable – in terms of both size and sophistication. You can add devices or upgrade your system anytime. It's easy – and cost-effective – to grow your system. For example, the Axis body worn solution features docking stations with a separate system controller, which keeps prices down when you add cameras. And because our system is based on open standards, you can always upgrade to a VMS or EMS that addresses your specific needs.

Always low total cost of ownership

If a one-time investment is what you're looking for, you can choose an on-premise system with zero recurring costs. Don't want to invest in new software? You can integrate our system with software you're already using. If you choose a VMS or EMS from one of our software partners, you'll pay license fees for that system only. Thanks to Axis Zipstream compression technology, you can keep storage costs down without compromising video quality. And our thoroughly tested, high-quality products are always a smart, long-term investment.

Officers get:

Quick and secure mounting

thanks to a variety of mounting accessories for all types of clothing.

Lightweight, robust, and water-resistant cameras

for all types of situations and weather conditions.

Over 12-hours of battery life

for reliable recording on long working days and USB port for convenient charging in the field.

Mobile app

for officers to view and label footage in the field.

“ Axis body cameras are a dramatic improvement over our old cameras. They're so easy to use – from the large, single-tap activation button to the docking stations that quickly recharge the cameras and offload their video at the same time.

Mark Stout, Chief of Putnam City Campus Police Department.

Made for officers

We designed Axis body worn solutions with your officers' needs front and center.

At the station

At the beginning of a shift, officers either pick up a preassigned camera or use the self-assign option. Self-assign allows officers to assign any camera they take from the dock to themselves by scanning their RFID tag. They can clip their camera onto their uniform, or hide it in a pocket or on a belt and mount one of our unobtrusive mini sensors wherever it's convenient. Our quick-charging, fast offloading cameras are ready to go when they are.

On the job

Officers can trust Axis body worn cameras to deliver sharp images and audio from the center of the action. Our body worn cameras turn on easily with a tap of an oversized button, or automatically if a weapon is unholstered* or when an officer falls down. They can buffer up to 90 seconds before they're switched on to catch the whole encounter. They keep on working if they're bumped, dropped, or rained on. They feature a stealth mode when needing to approach situations silently. They provide GPS/GNSS location data. And there's an easy-to-use mobile app so officers can view and label footage in the field.

Overtime and beyond

Even when shifts stretch into overtime, Axis body worn cameras keep up the pace because they feature high-quality, long-life batteries that last over 12 hours. Plus, officers can charge them with a standard USB charger in their vehicle or even at home if one day somehow slips into two. Then, when they finally return the camera to the docking station, it's easy to put away, and offloading through the system controller to your management system is fast, reliable, and secure.

*Automatic activation upon unholstering requires the purchase of an accessory from a third-party supplier.

Introducing **The Axis body worn solution**

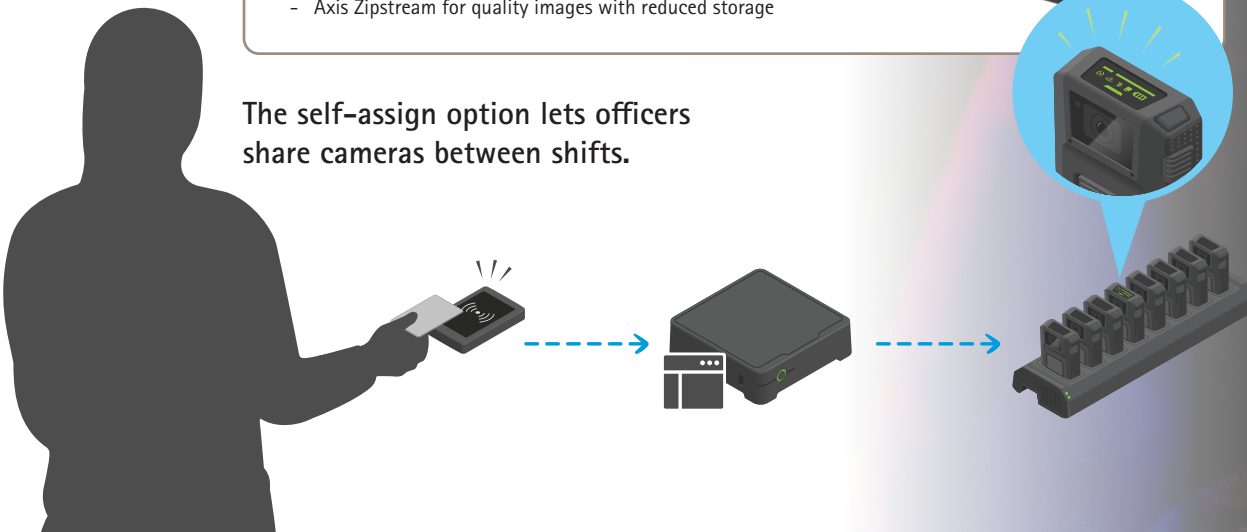

AXIS W120 Body Worn Camera

AXIS W120 is an easy-to-use, lightweight, and robust body worn camera that lets you store and manage crisp, clear video and audio recordings your way.

- Up to 14 hours operating time at 1080p
- Built-in WiFi and Bluetooth®
- Automatic recording activation upon fall detection or unholstering*
- Klick Fast System for easy mounting
- Live streaming
- Audio and video pre-buffering
- GNSS receiver for location tracking
- Integrated LTE modem enabling 'Bring your own SIM'
- Clear audio via dual microphones
- Rugged and durable with IP67 rating
- Axis Zipstream for quality images with reduced storage

The self-assign option lets officers share cameras between shifts.

Software for storing and managing video data captured with the Axis body worn system.

AXIS Camera Station Pro

Our on-premise video management system.

AXIS Body Worn Manager Pro

Configure, manage, and maintain large, distributed body worn systems from a secure and centralized location.

Solutions from our development partners

If you're currently using a VMS or EMS from one of our software partners, you can use it for your body worn system as well. Our system integrator partners can integrate our body worn system with any EMS or VMS on the market.

AXIS W701 Mk II Docking Station (8-bay)

AXIS W701 Mk II Docking Station supports fast, easy handling of up to eight Axis body worn cameras.

AXIS W700 Mk II Docking Station (1-bay)

AXIS W700 Mk II Docking Station supports fast, easy handling of a single Axis body worn camera.

AXIS W800 System Controller

AXIS W800 System Controller provides the central integration and management point of the body worn solution. It ensures a high speed and supervised data offloading from the cameras and has built in temporary storage. By linking multiple controllers, you can easily manage any number of cameras via one interface.

2N RFID Card Reader

Desktop USB reader from 2N for Axis body worn systems. It supports the self-assign functionality that lets officers pick up and self-assign any available body worn camera by scanning an RFID card.

AXIS TW1200 Body Worn Mini Bullet Sensor

AXIS TW1200 Body Worn Mini Bullet Sensor can be clipped to helmets or caps for a convenient alternative to filming with a full-sized AXIS W120 Body Worn Camera.

AXIS W401 Body Worn Activation Kit

AXIS W401 Body Worn Activation Kit automatically initiates recording of all body worn cameras in the same system when a designated trigger event occurs, such as a lightbar, siren, or panic button activation.

AXIS Body Worn Assistant

AXIS Body Worn Assistant is a free app for iPhone or Android that gives officers instant access to stored recordings on their AXIS W120 Body Worn Camera. They can also use it to add notes and tag video while in the field.

*Automatic activation upon unholstering requires the purchase of an accessory from a third-party supplier.

“ In a way, the body cam is a form of non-verbal communication. We've noticed that its presence has a positive effect on citizens. It's actually gained a lot of attention, and our officers get a lot of questions about it. Another value is, of course, the de-escalating effect it has on potentially volatile episodes, which is a very positive factor for our city.

Schal Sampat, Operational Coordinator Camera Surveillance, City of Almere.

Added value in many situations

Axis body worn cameras support safety and security for officers and the public alike, both on their own and by supplementing traditional surveillance cameras.

When deterrence is the name of the game

Axis body worn cameras make wearers and the public feel safer. They support transparency and accountability on the part of your department. And they deter unwanted behavior by both wearers and the public.

When there are no witnesses

Footage from Axis body worn cameras makes all the difference in 1-1 situations with no witnesses. Use video to get a detailed understanding of any situation or incident.

When there's a crowd

When officers are in a 1-to-many situation, it's often hard to see, hear and understand what's happening. Axis body worn cameras document the whole story at festivals, demonstrations, and so on.

When chasing a suspect

When an officer takes off after a suspect, they never know where the situation will take them or how it will end – whether on foot, or on a bike or motorcycle. Body worn cameras can provide clear and valuable documentation of the chase and its outcome.

When images aren't enough

Sometimes visual evidence doesn't provide the whole picture. A verbal attack can be taking place even if a situation looks peaceful. Clear audio recordings shed light on threats you can't see.

Made for forensic value

Axis body worn solutions keep working hard for your department long after your officers have docked their cameras and the footage has been securely offloaded to your chosen content management system.

Effective case management

Axis body worn camera systems don't just capture evidence and document actions, they store and manage it in a way that works for you. Recordings are automatically imported with incident time and location and any metadata they've been tagged with. You can easily manage and access those recordings and quickly export high-definition evidence with AXIS Camera Station (ACS) Pro. You can also integrate your record management system and/or computer-aided dispatch system with ACS Pro for automatic case creation and the addition of evidence from other internal and external sources.

Superior forensic usability

Axis body worn cameras record video from the angle of the camera wearer, and all audio from the incident. They deliver sharp audio recorded from up to five meters (16 feet) away, and best-in-class video that you can use in investigations and in court. When combined with traditional video surveillance, recordings can also provide high-quality audio and added insight into incidents.

Great for training purposes

Footage from Axis body worn cameras is also a useful tool for teaching officers how to respond to situations they're likely to encounter. For example, trainers can analyze footage of an incident, or use recorded incidents as the basis for testing how students would respond to similar circumstances.

The evidence you need

For training and documentation

Efficient case management

- Automatic tagging with time, location and other metadata
- Automatic case creation possible

Evidence that stands up in court

- Clear, true-to-life images
- Clear audio up to 5 meters

A useful tool for training

- Examine and analyze incidents
- Test officer response to recordings of real situations in a classroom setting

Part of a complete surveillance solution

Proven technology. Quality. Flexibility. Our body worn solution is part of a comprehensive offering of video cameras and other network security equipment for law enforcement. And it's all based on the same proven technology, attention to quality, and focus on flexibility and scalability that have made us a leader in network video since the beginning.

AXIS Camera Station Pro

An on-premises VMS that makes it easy to manage and access recordings, handle incidents, and quickly export evidence.

AXIS Audio Manager Pro

Lets you manage a large site and control all your audio devices from a single user interface.

Axis network intercoms

Highly robust intercoms with night vision and exceptional audio for two-way communication, video identification, and remote entry control.

AXIS F Series Cameras for patrol cars

Discreetly install the rugged IP66-rated AXIS F1005-E Sensor Unit in tight places like the lightbar on top of a patrol car.

AXIS Q16 Series Fixed box cameras

Combines exceptional video performance with outstanding hardware and processing capabilities. It's the perfect platform for AI-based analytics.

Axis network horn speaker

Deter unwanted activity and warn off potential troublemakers detected by your cameras with this rugged, easy-to-integrate network horn speaker.

Axis panoramic and multisensor cameras

Multisensor camera for seamless 180° coverage with great detail and minimal distortion.

AXIS Q61 Series PTZ Cameras

The series provides both wide-area coverage and great detail with perfect image quality in all directions – above and below the horizon.

AXIS Q17 Series License Plate Camera

A dedicated license plate camera that's ideal for law enforcement purposes like gathering forensic evidence and locating stolen vehicles.

SOS intercom

SOS poles equipped with 2N® IP SAFETY intercoms allow reliable two-way communications in emergencies. They support citizen safety and the dispatch of officers in response to incidents.

AXIS Q36 Series Fixed Dome Cameras

A camera that can be integrated into a deployable 4G or LTE-based surveillance solution for temporary situations or remote locations when a traditional network is not available

Axis body worn camera

A robust, easy-to-use body worn camera that lets you store and manage video in an Axis system or a system of your choice.

About Axis Communications

Axis enables a smarter and safer world by creating solutions for improving security and business performance. As a network technology company and industry leader, Axis offers solutions in video surveillance, access control, intercom, and audio systems. They are enhanced by intelligent analytics applications and supported by high-quality training.

Axis has around 4,000 dedicated employees in over 50 countries and collaborates with technology and system integration partners worldwide to deliver customer solutions. Axis was founded in 1984, and the headquarters are in Lund, Sweden.
