

AXIS Optimizer unites video and access control

AXIS Secure Entry for XProtect is the access control module within AXIS Optimizer that unites video and access control inside XProtect. It offers features to manage door access, monitor activity, assist operators, and investigate events.

Explore the benefits of uniting video and access control across every stakeholder group.

Benefits for system administrators

Simplify system management through a single user database

About Secure Entry for XProtect

Visit our [hub](#) for on-demand videos, step-by-step guides, and resources to see how a unified video and access control system can benefit you.

Benefits for system administrators

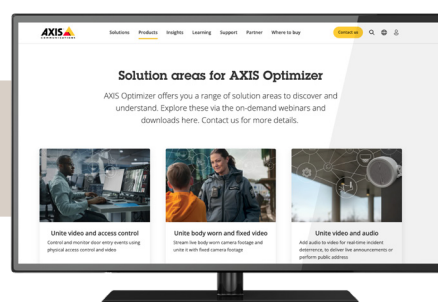

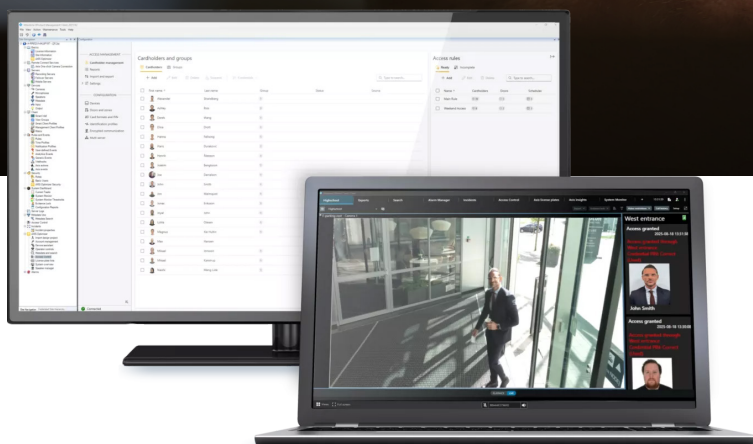

Simplify system management through a single user database

This solution ensures administrator roles enjoy great user experiences, saving them considerable time and effort when setting up and managing their system. With a clearer, real-time view in one place, it's easy to spot issues fast and keep things running smoothly.

One unified solution. Multiple benefits.

- **Simplified setup with one time installation:** Built into XProtect Update Manager, all required drivers and extensions are loaded at one time – no need to find and install each plugin separately.
- **Import designs and settings:** Import a complete AXIS Site Designer project into XProtect Management Client, including all camera names and configurations, recording schedules, and analytics configuration settings.
- **Remote auto-upgrade:** Perform system-wide upgrades of AXIS Optimizer on all connected Smart Client machines from anywhere and ensure the system is always up to date with the latest capabilities and security features.
- **Manage user privileges:** Easily configure which capabilities an operator has access to. Use built-in security role settings to set up role-specific, tailored workflows, ensuring daily tasks become safer and less prone to human error. You can add users once, assign access, link IDs, and even revoke access instantly.
- **Efficiently manage all Axis devices:** Review device warranty information, perform device software upgrades on multiple devices simultaneously, apply security policies to harden the system, and more.
- **Adjust device settings and features inside XProtect:** Change settings without logging into the device separately. Manage all Axis camera settings and passwords from within XProtect. Access device-specific features directly in the Smart Client as overlays and easily add on capabilities as needed.
- **Automated event handling:** Easily view, manage, and troubleshoot events with a dedicated control panel for event management. Search and view the status for automated events for all connected devices. Map Axis alarms and analytics to responsive actions.

Benefits for operators and investigators

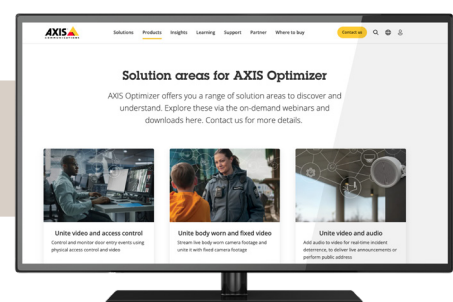

Gain a unified view and enable faster, more confident decision-making

This solution ensures administrator roles enjoy a smoother user experience, saving them valuable time and effort. With a clearer, real-time view of what's happening at the door, they can quickly understand the situation and respond faster.

One unified solution. Multiple benefits.

- **One comprehensive united view:** Operators can access all necessary information from one interface, making it easy to stay alert, be effective, and quickly and confidently address any situation.
- **One platform to learn:** With AXIS Optimizer, there's only one platform to learn. No more jumping between applications to figure out what's happening.
- **One united way of working:** Operators and investigators can manage all security workflows as one task. This efficiency empowers them, so they can easily monitor events, handle response protocols, and run investigations across the entire organization, no matter where they are.
- **Access information on any site from anywhere:** Operators can centrally manage distributed and global systems using mobile apps and dynamic maps to easily locate devices and handle alarms across all sites.
- **Efficient investigations:** Investigators can easily search inside XProtect for Axis-tagged objects, without having to look through thousands of hours of footage. They can instantly see live video linked to the corresponding door event – no need to manually match timestamps between events – making it quick and easy to turn the raw data into evidence and securely share it with others.
- **Speed up response and resolution:** A single intuitive view gives operators the information they need when they need it. They can view video, handle alarms, receive intercom calls, run investigations, analyze data, and much more – all from one intuitive interface.

United video and access control

Benefits for system integrators

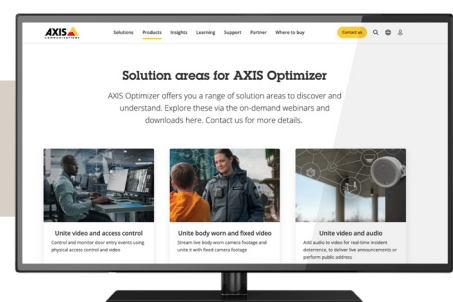

Deliver more value and advanced solutions faster while strengthening customer relationships

This solution helps system integrators deploy systems faster, reduce compatibility issues, and deliver solutions that are easier for customers to run and scale.

One unified solution. Multiple benefits.

- **Design complete security solutions:** By combining best-of-breed components into one unified architecture, integrators can deliver tailored solutions to meet customers' specific needs.
- **Faster deployments:** Deliver projects faster and more efficiently with fewer compatibility issues and less integration risk.
- **Out-of-the-box seamless integration:** Reduce installation, configuration, and maintenance complexity with one united, validated platform where everything just works.
- **Improved profitability:** Increase margins and reduce support overhead through more efficient deployments.
- **Become a trusted advisor:** Differentiate your business by delivering intelligent, unified, high-value solutions instead of standalone products.
- **Greater customer ROI:** Help customers improve efficiency, reduce risk, and maximize the value of their investment.
- **Streamlined management:** Simplify commissioning and ongoing management with unified workflows, user management, and reporting.
- **Stronger customer relationships:** Create ongoing opportunities for maintenance contracts, software updates, training services, and system expansions.

Benefits for end user organizations

Reduce total cost of ownership by simplifying IT infrastructure and strengthening overall security

This solution helps end user organizations work more efficiently, reduce complexity, and protect their investments over time. From security teams and IT departments to facility managers and business leaders, a united solution delivers clear operational and business benefits.

One unified solution. Multiple benefits.

- **Turn security into a strategic asset:** With one united system, you improve visibility, make smarter decisions, and strengthen compliance.
- **Faster response times:** Improve efficiency and response times with synchronized video, access events, and automated workflows.
- **Lower operational costs:** Reduce complexity and operational costs by consolidating infrastructure, maintenance, licensing, and training into one united and validated system.
- **Future-ready solution:** Protect your existing infrastructure and scale more easily with a unified system designed to support future expansion, AI-powered analytics, and more.
- **Deeper operational insights:** Combine video and access control data to better understand occupancy, traffic flow, and space utilization trends.
- **Stay secure:** Simplify cybersecurity and IT management with centralized user control, consistent policies, and streamlined updates.
- **Reduce infrastructure complexity:** Reduce hardware, simplify network architecture, and lower energy consumption.
- **Easier system integration:** Integrate more easily with HR, visitor management, and building management systems using open APIs and unified workflows.
