

AXIS Optimizer unites video and audio

AXIS Audio Manager for XProtect is the audio module within AXIS Optimizer that brings audio and video together inside XProtect. Manage cameras, speakers, intercoms, and microphones in one unified interface to monitor events, communicate in real time, and respond efficiently to incidents.

Explore the benefits of uniting video and audio across every stakeholder group.

Benefits for system administrators

Centralize system management of devices, users, and resources in one unified platform

About AXIS Audio Manager for XProtect

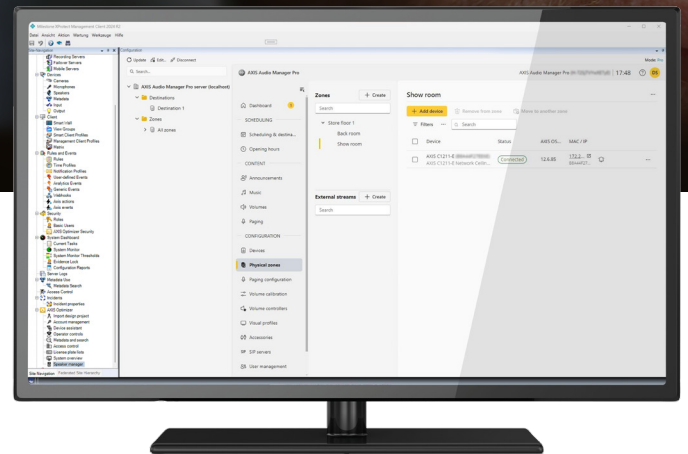

Visit our [hub](#) for on-demand videos, step-by-step guides, and resources to see how a unified video and audio system can benefit you.

Benefits for system administrators

Centralize system management of devices, users, and resources in one unified platform

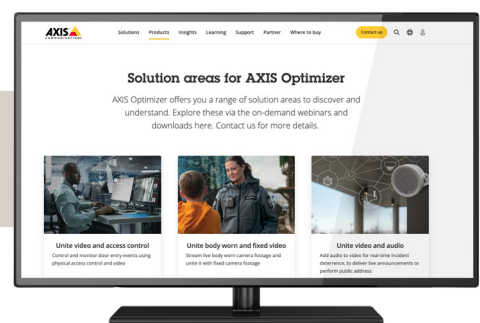

This solution ensures administrator roles enjoy great user experiences, saving them considerable time and effort when setting up and managing their system.

One unified solution. Multiple benefits.

- **Centralized management:** Manage all video and audio devices, settings, user permissions, and recordings from a single interface. This simplifies configuration, troubleshooting, updates, and ongoing maintenance.
- **Simplified user management:** Define user roles and permissions across both video and audio in one system, ensuring consistent security policies and faster onboarding and offboarding of staff.
- **Optimized resource utilization:** Efficiently manage storage, network bandwidth, and server resources in one system, reducing the complexity of balancing capacity across separate platforms.
- **Easier system backups and recovery:** Apply a single backup and recovery strategy across video, audio, and data. This supports consistent retention policies and reduces training, as teams only need to learn one platform.

Benefits for operators and investigators

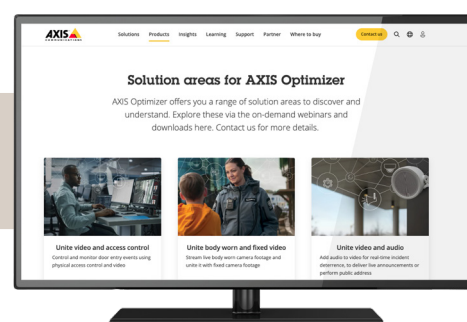

See, hear, and respond in real time with synchronized audio and video in a single Smart Client view

This solution helps operators understand and respond to events more effectively by bringing video and audio together in one interface. This enables faster decisions, clearer communication, and more efficient handling of incidents.

One unified solution. Multiple benefits.

- **Enhanced situational awareness:** Gain a complete understanding of real-time events by combining video and audio. Synchronized audio adds critical context that enables faster, more accurate incident assessment.
- **Faster incident response:** Identify, verify, and respond to incidents without switching between systems, while improving response times and efficiency
- **More robust evidence collection:** Capture synchronized video and audio recordings to create a clearer, more reliable record of events for investigations and reporting.
- **Simplified search and retrieval:** Search for specific events and timelines more easily with video and audio indexed together and accessible in one system.
- **Reduced mental load:** Work within a single interface without needing to piece together separate data sources, allowing operators to stay focused and make decisions more effectively.

Benefits for system integrators

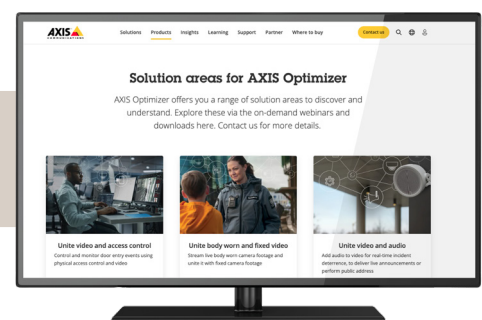

Streamline solution design and deployment with validated Axis integrations

This solution helps system integrators design, deploy, and support unified video and audio systems more efficiently, reducing complexity and simplifying delivery.

One unified solution. Multiple benefits.

- **Simplified design and deployment:** Design and implement cohesive video and audio solutions without the complexity of integrating separate systems, streamlining the entire project lifecycle from planning to commissioning.
- **Validated compatibility:** Rely on validated Axis integrations within XProtect that go beyond standard connectivity, eliminating the need for custom integrations, API development, and ongoing compatibility troubleshooting.
- **Enhanced solution offering:** Deliver more advanced and feature-rich solutions that combine video, audio, and analytics, positioning your offering as a complete security and operations solution rather than separate components.
- **Easier training and support:** Simplify onboarding and reduce support effort with a single unified system, giving users one interface to learn and a single point of reference for troubleshooting.
- **Competitive advantage:** Stand out in the market by delivering integrated, user-friendly solutions that demonstrate expertise.

Benefits for end user organizations

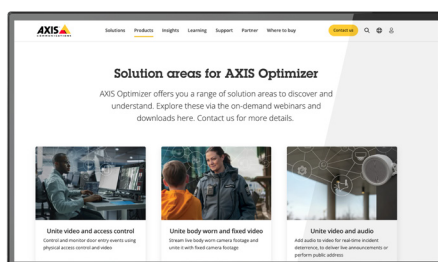

Reduce total cost of ownership, improve operational efficiency, and scale for future needs

This solution helps end user organizations simplify operations, reduce complexity, and get more value from their investment through a unified video and audio system.

One unified solution. Multiple benefits.

- **Reduced total cost of ownership:** Lower hardware, software, maintenance, and IT expenses by unifying video and audio in one system. Improve operational efficiency through faster investigations and less manual effort, driving measurable cost savings and stronger return on investment.
- **Streamlined compliance and auditing:** Store and manage video, audio, and metadata in one system, making it easier to meet regulatory requirements and respond to audit requests.
- **Scalability and future-ready systems:** Easily expand your unified video and audio system with new locations, zones, or capabilities without costly upgrades or replacements, supporting long-term growth.
