

Designing Network Video Solutions

Course description

Designing Network Video Solutions covers many important aspects of designing a network video surveillance system. Topics such as surveillance goals, camera placement, light considerations and video analytics are discussed. All theory presented is put into practice in comprehensive lab sessions.

Target group

Professionals working with network video design.

Prerequisites

In order to get the most out of the training, we strongly recommend all students to first attend the Network Video Fundamentals Classroom training.

Course objectives

The objectives of this training are for participants to:

- > Become familiar with the cornerstones of a network video system
- > Understand how product selection and camera placement effect the usability of a system
- > Be able to make decisions on products and placement based on customer needs
- > Be able to use Axis' system design tools to facilitate the design process
