

End-to-end solutions with AXIS Camera Station

Length: 1 day
Format: Classroom

Course description

This classroom-based course demonstrates how to create end-to-end solutions using AXIS Camera Station as the video management software (VMS). You start with a simple surveillance system, a VMS, and a camera. Then you begin to expand the system by adding products beyond the cameras. Finally, you'll learn to combine the different products optimized for powerful surveillance and efficient operations.

Course objectives

After completing the course, participants will:

- > Learn about basic setup and operation of AXIS Camera Station video management software
- > Be able to build up an end-to-end solutions using AXIS Camera Station + ACAP + Axis devices
- > Understand the basics of VAPIX and using it to integrate with different Axis products
- > Be confident configuring multiple Axis video analytics and Axis devices, e.g. AXIS Guard Suite, AXIS Parking Violation Detection, Axis network door station, etc.

Who should attend?

System integrators and installers in the network video surveillance industry who focus on designing end-to-end solutions.

Prerequisites

None.
