

Axis Communications' Academy

Seminar description

Heat up Sales with Axis Thermal Cameras

Axis Business Seminar

Length: 1-2 hours

Format: seminar

Course description

The Business Seminar "Heat up Sales with Axis Thermal Cameras" will provide information that is necessary in understanding the use and potential need of Axis thermal cameras in a video surveillance system. The course will also describe how to effectively integrate Axis thermal camera technology with existing Axis network cameras, expanding the system's surveillance capabilities. For any professional, in the IT integrator, system design, sales, and analog integrator fields, this seminar will provide valuable information for the successful integration of this technology.

Course objectives

You will learn:

- > The Johnson's Criteria used to determine detection, identification and recognition of targets based on pixel density
- > How to factor environmental conditions into the detection range of Axis thermal cameras
- > The requirements of video analytic applications that affect the capabilities of Axis thermal cameras by having a higher pixel on target requirement
- > How to augment an existing video surveillance system with Axis thermal cameras

Who should attend?

Analog and IT systems integrators, sales professionals and installers seeking to expand their knowledge of Axis thermal cameras and the capabilities and benefits of using them.

Prerequisites

Video surveillance or physical security background.
