

Axis Communications' Academy

Seminar description

Utilizing Video Encoders

Axis Business Seminar

Length: 3 hours

Format: seminar

Course description

The Utilizing Video Encoders Business Seminar will provide information that is necessary in understanding the implementation of Axis video encoders into a video surveillance system. The course will highlight the differences in the capabilities of analog and network cameras. The course will describe how to effectively integrate existing 3rd party analog camera technology with existing IP network cameras, expanding the system's surveillance capabilities. For any professional, in the IT-Integrator, System Design, Sales, and Analog Integrator fields, this seminar will provide valuable information for the successful integration of this technology..

Course objectives

You will learn:

- > How to use Axis video encoders to extend the lifespan of legacy analog equipment
- > How to create a clear migration path from analog to IP using Axis video encoders
- > The added benefits of Intelligent Video by using Axis Video Encoders to create a hybrid solution

Who should attend?

Analog and IT systems integrators, sales professionals and installers seeking to expand their knowledge of Axis video encoders and the capabilities and benefits of using them.

Prerequisites

Video surveillance, or physical security, or IT industry background.
