

Top reasons for network intercoms.

Axis network intercoms combine video surveillance, communication and remote entry control in a single device.

They make a valuable complement to your surveillance and access control solutions, providing reliable visual identification and voice communication.

Why choose network intercoms?

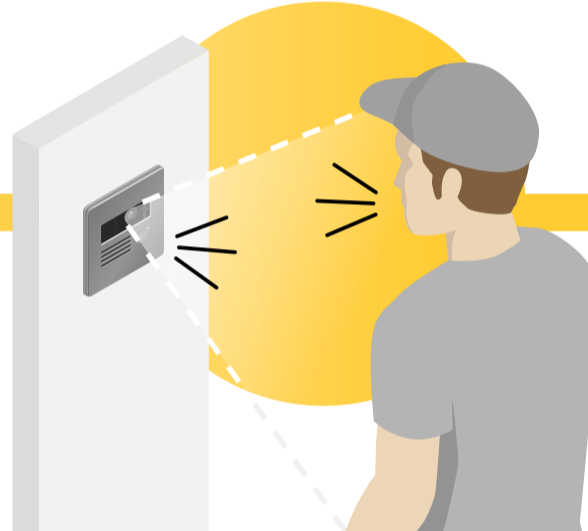

Extend your security system

Axis network intercoms connect to any video management system, so you can leverage your current security solution to improve secure access to your premises and communication with the caller.

Top-notch video and audio

Full-fledged Axis network video cameras with advanced technologies like Wide Dynamic Range (WDR) and great low-light performance, noise reduction and echo cancellation for always-reliable identification.

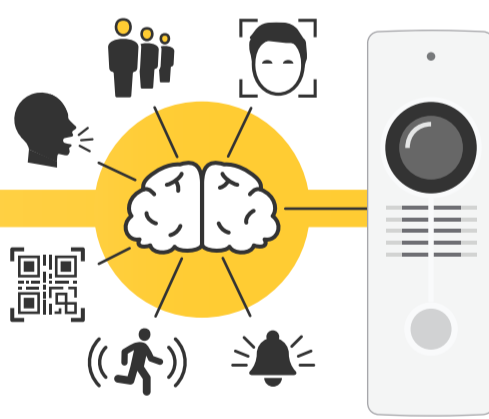

Direct or remote access control

See, talk to, identify, and then open the door to visitors directly or remotely from wherever you are. You can use your cell phone, IP phone or video management system to do it.

Smart analytics for extra security

Built-in intelligence and audio and video analytics, help keep you fully aware of what's happening.

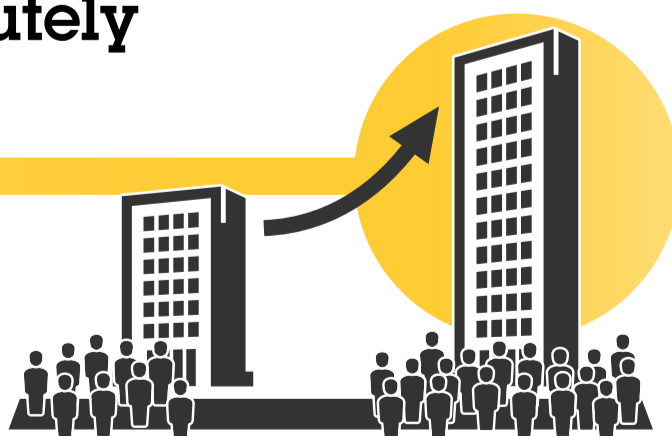

Complete freedom to choose

Open standards and interface gives you the freedom to mix and match best-of-breed hardware and software.

Scalability – absolutely future-proof

Add network intercoms, expand your communication system or upgrade the backbone of your system as you grow, while preserving the value of your investment.
