

AXIS A1001 Network Door Controller

Open and flexible—powered by IP

AXIS A1001 Network Door Controller is a non-proprietary, open, and IP-based access controller suitable for both smaller installations and advanced mid-size systems. AXIS A1001 comes with built-in software for basic access management and is also open for third-party software. This allows the unit to be integrated with other systems such as video surveillance, intrusion detection and time and attendance. The controller is powered over Ethernet and can also power connected equipment, minimizing the need for extra cabling. AXIS A1001 is a smart independent device that is installed by each door, making the solution scalable. Using open standards, it is also future-proof.
