

AXIS Camera Management

Efficient management of Axis network products

AXIS Camera Management is a powerful application for efficient management of all connected Axis devices, also across multiple sites. The software automatically locates Axis devices on the local network and enables the user to configure network settings and other parameters. Configurations can be copied and restored, or used as a template to quickly configure large amounts of devices. Firmware upgrades and ACAP application installations can be performed as batch operations. AXIS Camera Management has an intuitive user interface. User-defined tags make it easy for example to group cameras by location or list cameras scheduled for firmware upgrade.

- > Fast configuration of new devices
- > Easy backup and restoring of settings
- > Efficient installation of firmware upgrades and applications
- > Support for multi-site management

Technical Specifications - AXIS Camera Management

Compatible products

Models Axis network cameras and encoders including HD, standard resolution, high resolution, Pan Tilt Zoom and thermal cameras with firmware 4.40 or later. Axis physical access control products, Axis network speakers, Axis network switch
Note: AXIS Companion Line products can only be used with AXIS Companion video management system.

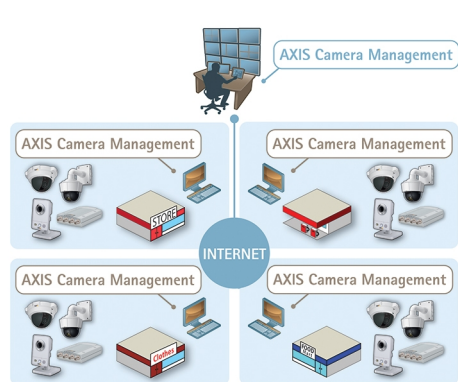

Camera management

Finding new devices	Discovery of new devices on the network, within the local subnet or on remote networks
Device tagging	User-defined tags
Unit status	Device status monitoring indicating accessible devices
Device configuration	Save, copy and configure standard parameters including Action rules, Stream profiles, Device time, Device users and IP settings to several devices, Backup and restore of camera settings
Device management	Restore to factory default values or restart device

Camera management

Firmware upgrade	Upgrade of multiple devices sequentially or in parallel Automatic download of latest available firmware from Axis
Application management	Support for AXIS Camera Application Platform Installation of Axis-compatible applications including license files to multiple devices
General	
Logging	Activity log with sort/search functions showing performed actions and changed device status
Languages	English, French, German, Italian, Arabic, Czech, Chinese (Simplified), Chinese (Traditional), Dutch, Finnish, Japanese, Korean, Persian, Polish, Portuguese (Brazil), Russian, Spanish, Swedish, Thai, Turkish, Vietnamese
Minimum system requirements	Intel i5 or equivalent AMD RAM: 2 GB (8 GB recommended for larger systems) Operating system: 64-bit operating system
System recommendations	For a list of all supported operating systems, see the release notes available on www.axis.com/techsup Always use the latest service packs. Microsoft .NET runtime environment (included in installation package).
