

## AXIS Streaming Assistant

The easy way to broadcast video and audio from an Axis camera.

- > Automatic camera discovery and setup
- > Supports multiple cameras
- > Support for a wide range of applications
- > Audio support
- > PTZ support

AXIS Streaming Assistant is an application that makes video and audio streams from an Axis camera accessible in streaming applications such as Skype or Adobe Flash Media Live Encoder. This makes it possible to easily set up a solution for live broadcasting over the Internet.

When AXIS Streaming Assistant is installed on a computer, it will automatically discover any Axis product on the network. The video and audio streams from the cameras can then be used in other applications.

AXIS Streaming Assistant supports streams from multiple cameras providing maximum flexibility. The H.264 compression enables optimization of bandwidth by significantly reducing the bit rate.

The application supports most software applications that can integrate external video and audio streams.

AXIS Streaming Assistant makes it possible to easily set up a wide range of broadcasting solutions such as live traffic information, promotion of the interior or exterior of a restaurant or a hotel, live broadcasting of a temporary event or an easy way to add video and audio to an Internet-based conference system.

# Technical Specifications – AXIS Streaming Assistant

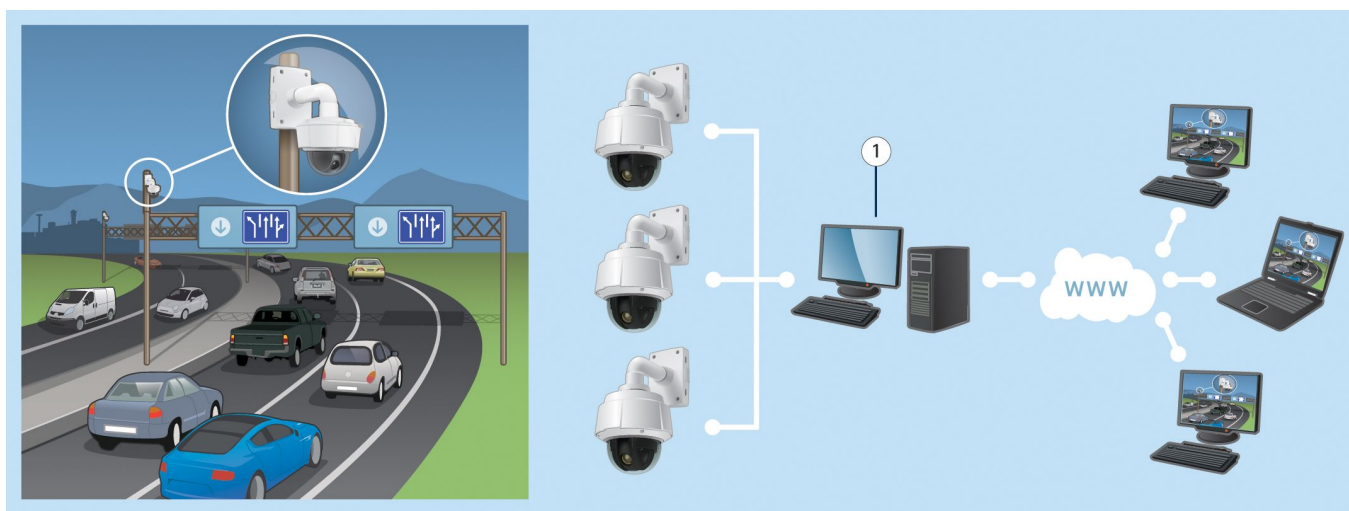

Application	
<b>Settings</b>	Audio <sup>a</sup> Secure connections (HTTPS) Display format PTZ control with AXIS T8311 Joystick
Capture format and protocol	
	H.264 and MPEG-4 over RTP/RTSP/HTTP with synchronized audio
Supported products	
	All Axis cameras and encoders with firmware 4.47 and later and AXIS P8221 Network I/O Audio Module
Scenarios	
<b>Typical applications</b>	Live promotion, video conferencing, broadcasting of temporary applications
System requirements	
<b>Minimum requirements</b>	Windows XP and higher Microsoft .NET Framework 4 client profile runtime environment

Supported applications and services	
<b>Technical requirements</b>	Software with support for Windows Driver Model (WDM)
<b>Broadcasting</b>	Microsoft Expression Encoder, Adobe Flash Media Live Encoder, Ustream.com and more
<b>Conferencing</b>	Skype, Adobe Connect, Google+ and more
General	
<b>Languages</b>	English

a. Audio streaming requires Adobe Flash Media Live Encoder or Microsoft Expression Encoder
