About perimeter protection

For areas in need of intrusion detection, you can set up perimeter protection using thermal cameras with analytics. The main objective for perimeter protection is to detect a threat or an actual intrusion at the earliest possible stage.

To set up perimeter protection, you need to install an analytics application for perimeter surveillance and protection on your thermal camera. Axis provides the AXIS Perimeter Defender application for this purpose. You can read more about AXIS Perimeter Defender at axis.com/products/axis-perimeter-defender
AXIS Q19 Series

Solution overview

- To let possible intruders know that your perimeter is protected, use a flashing beacon (3). See How to connect a flashing beacon on page 9.

- To warn and deter, connect a horn speaker (2) that plays a pre-recorded warning message. See How to connect a network horn speaker on page 10.

Product overview

1. Power connector
2. I/O and audio terminal connector (multi-connector)
3. Network connector
4. Status indicator LED
5. MicroSD memory card slot
6. Control button
7. Foot
8. Mounting bracket
AXIS Q19 Series

Find the device on the network

Find the device on the network

To find Axis devices on the network and assign them IP addresses in Windows®, use AXIS IP Utility or AXIS Device Manager. Both applications are free and can be downloaded from axis.com/support

For more information about how to find and assign IP addresses, see the document How to assign an IP address and access your device on the device page at axis.com

Browser support

You can use the device with the following browsers:

<table>
<thead>
<tr>
<th></th>
<th>Chrome™</th>
<th>Firefox®</th>
<th>Edge®</th>
<th>Safari®</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows®</td>
<td>recommended</td>
<td>x</td>
<td>x</td>
<td></td>
</tr>
<tr>
<td>OS X®</td>
<td>recommended</td>
<td></td>
<td></td>
<td>x</td>
</tr>
<tr>
<td>Other operating systems</td>
<td>x</td>
<td>x</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If you need more information about recommended browsers, go to axis.com/browser-support
Access the device

1. Open a browser and enter the IP address or host name of the Axis device.
   
   If you have a Mac computer (OS X), go to Safari, click on Bonjour and select the device from the drop-down list. To add Bonjour as a browser bookmark, go to Safari > Preferences.
   
   If you do not know the IP address, use AXIS IP Utility or AXIS Device Manager to find the device on the network.
   
2. Enter the username and password. If you access the device for the first time, you must set the root password. See Set a secure password for the root account on page 6.
   
3. The live view page opens in your browser.

Set a secure password for the root account

Important

The default administrator username is root. If the password for root is lost, reset the device to factory default settings.

1. Type a password. Follow the instructions about secure passwords. See Secure passwords on page 6.
2. Retype the password to confirm the spelling.
3. Click Create login. The password has now been configured.

Secure passwords

Important

Axis devices send the initially set password in clear text over the network. To protect your device after the first login, set up a secure and encrypted HTTPS connection and then change the password.

The device password is the primary protection for your data and services. Axis devices do not impose a password policy as they may be used in various types of installations.

To protect your data we strongly recommend that you:

- Use a password with at least 8 characters, preferably created by a password generator.
- Don't expose the password.
- Change the password at a recurring interval, at least once a year.

AXIS Q19 Series

Setup

Need more help?

You can access the built-in help from the device's webpage. The help provides more detailed information on the device's features and their settings.

Applications

AXIS Camera Application Platform (ACAP) is an open platform that enables third parties to develop analytics and other applications for Axis products. To find out more about available applications, downloads, trials and licenses, go to axis.com/applications

To find the user manuals for Axis applications, go to axis.com
• Several applications can run at the same time but some applications might not be compatible with each other. Certain combinations of applications might require too much processing power or memory resources when run in parallel. Verify that the applications work together before deployment.

How to connect a flashing beacon

Use a flashing beacon to let possible intruders know that your perimeter is protected.

This scenario explains how to connect a flashing beacon and set it up to flash whenever the thermal camera detects an intrusion. In this scenario the beacon can only be activated to flash due to alarms outside office hours, between 18.00 and 08.00 Monday-Friday, and it should flash for 30 seconds each time it is activated.

Required hardware

• Multicable, see Multiconnector on page 18
• Connecting wires (one blue and one red, min area: 0.25 mm², max area: 0.5 mm²)
• Flashing beacon (12 V DC, max 50 mA)

Note

The maximum length of the connecting wires depends on the wire area and the power consumption of the beacon.

Physical connection

1. Connect the multicable to the camera.
2. Connect the red wire to pin 2 (DC output, +12 V DC) of the multicable I/O terminal connector.
3. Connect the other end of the red wire to the connector marked with + on the flashing beacon.
4. Connect the blue wire to pin 3 (I/O port) of the multicable I/O terminal connector.
5. Connect the other end of the blue wire to the connector marked with − on the flashing beacon.

Configure I/O ports

You need to connect the flashing beacon to the camera in the camera's webpage. The first part of this is to configure the I/O ports.

1. Go to System > I/O ports.
2. In the Port 1 drop-down list, select Output.
3. Enter a name for the output module, for example “Flashing beacon”.
4. To make the beacon start flashing when an event occurs, select Open circuit in the drop-down list.

Create an action rule

For the camera to send a notification to the beacon to start flashing when something is detected, you need to create an action rule in the camera.
1. Go to Settings > System > Events and add a rule.
2. Enter a name, for example “Flashing beacon”.
3. In the list of conditions, select the perimeter defender application.
4. Select Use this condition as a trigger.
5. Add another condition.
6. In the list of conditions, select Scheduled event.
7. In the list of schedules, select After hours.
8. In the list of actions, select Output port.
9. In the port list, select “Flashing beacon”.
10. Set the duration to 30 seconds.
11. Click Save.

How to connect a network horn speaker

Use a network horn speaker to warn and deter possible intruders.

This scenario explains how to connect an Axis network horn speaker to the camera and set it up to play an audio clip whenever the thermal camera detects an intrusion. In this scenario, the horn speaker can only be activated due to alarms coming outside office hours, between 18.00 and 08.00 Monday-Friday.

Add a recipient

Note

An audio clip must be available in the horn speaker and you need to know the number of the audio clip. To find out the number of the audio clip, type the following command: `http://[HornSpeakerIP]/axis-cgi/param.cgi?action=list`, where `[HornSpeakerIP]` is the IP address of the horn speaker. You find the number after the letter M in the list displayed.

Connect the camera to the horn speaker by setting it up as a recipient in the camera.

1. Go to Settings > System > Events > Recipients and add a recipient.
2. Enter a name, for example “Horn speaker”.
3. In the Type list, select HTTP.
4. In the URL field, enter `http://[HornSpeakerIP]/axis-cgi/playclip.cgi?clip=[x]`.
   - `[HornSpeakerIP]` is the IP address of the horn speaker
   - `[x]` is the audio clip number
5. Enter the username and password for the horn speaker.
6. To try the connection, click Test.

Create a rule

For the camera to send a notification to the horn speaker to play the audio clip when something is detected, you need to create a rule in the camera.

1. Go to Settings > System > Events and add a rule.
2. Enter a name, for example “Horn speaker”.
3. In the list of conditions, select the perimeter defender application.
4. Select Use this condition as a trigger.
5. Add another condition.
6. In the list of conditions, select Scheduled event.
7. In the list of schedules, select After hours.
8. In the list of actions, select Send notification through HTTP and then select Horn speaker.
9. Click Save.

Image quality

Color palettes
Color palettes applied to thermal images help the human eye distinguish image details. The colors in the palette are artificially created pseudocolors that emphasize temperature differences.

The product has several color palettes to choose from. If an operator watches the video stream, you can choose any of the palettes. If the video stream is only used by applications, select the white-hot palette.

Stabilize a shaky image with Electronic Image Stabilization (EIS)

Electronic Image Stabilization (EIS) can be used in environments where the product is mounted in an exposed location and subject to vibrations, for example, wind or passing traffic. Turn on EIS to get a smoother and steadier image without blur.

EIS also reduces the file size of the compressed image and lowers the bitrate of the video stream.

Note
When EIS is turned on the image is cropped slightly, lowering the maximum resolution.

1. Go to Settings > Image > Image correction.
2. Turn on EIS.

Streaming and storage

Reduce bandwidth and storage

Important
If you reduce the bandwidth it can result in loss of details in the picture.

1. Go to live view and select H.264.
2. Go to Settings > Stream.
3. Do one or more of the following:
   - Turn on the Zipstream functionality and select the desired level.
   - Turn on dynamic GOP and set a high GOP length value.
   - Increase the compression.
   - Turn on dynamic FPS.
Set up network storage

To store recordings on the network, you need to set up network storage:

1. Go to Settings > System > Storage.
2. Click Setup under Network storage.
3. Enter the IP address of the host server.
4. Enter the name of the shared location on the host server.
5. Move the switch if the share requires a login, and enter username and password.
6. Click Connect.
AXIS Q19 Series

Troubleshooting

Troubleshooting

If you can't find what you're looking for here, try the troubleshooting section at axis.com/support

Reset to factory default settings

Important

Reset to factory default should be used with caution. A reset to factory default resets all settings, including the IP address, to the factory default values.

To reset the product to the factory default settings:

1. Disconnect power from the product.
2. Press and hold the control button while reconnecting power. See Product overview on page 4.
3. Keep the control button pressed for 15–30 seconds until the status LED indicator flashes amber.
4. Release the control button. The process is complete when the status LED indicator turns green. The product has been reset to the factory default settings. If no DHCP server is available on the network, the default IP address is 192.168.0.90
5. Use the installation and management software tools to assign an IP address, set the password, and access the video stream.

The installation and management software tools are available from the support pages on axis.com/support

It is also possible to reset parameters to factory default through the web interface. Go to Settings > System > Maintenance and click Default.

Firmware options

Axis offers product firmware management according to either the active track or the long-term support (LTS) tracks. Being on the active track means continuously getting access to all the latest product features, while the LTS tracks provide a fixed platform with periodic releases focused mainly on bug fixes and security updates.

Using firmware from the active track is recommended if you want to access the newest features, or if you use Axis end-to-end system offerings. The LTS tracks are recommended if you use third-party integrations, which are not continuously validated against the latest active track. With LTS, the products can maintain cybersecurity without introducing any significant functional changes or affecting any existing integrations. For more detailed information about Axis product firmware strategy, go to axis.com/support/firmware

Check the current firmware

Firmware is the software that determines the functionality of network devices. One of your first actions when troubleshooting a problem should be to check the current firmware version. The latest version may contain a correction that fixes your particular problem.

To check the current firmware:

1. Go to the product's webpage.
2. Click on the help menu.
3. Click About.
AXIS Q19 Series

Troubleshooting

Upgrade the firmware

**Important**
Preconfigured and customized settings are saved when the firmware is upgraded (provided that the features are available in the new firmware) although this is not guaranteed by Axis Communications AB.

**Important**
Make sure the product remains connected to the power source throughout the upgrade process.

**Note**
When you upgrade the product with the latest firmware in the active track, the product receives the latest functionality available. Always read the upgrade instructions and release notes available with each new release before upgrading the firmware. To find the latest firmware and the release notes, go to axis.com/support/firmware

1. Download the firmware file to your computer, available free of charge at axis.com/support/firmware
2. Log in to the product as an administrator.
3. Go to Settings > System > Maintenance. Follow the instructions on the page. When the upgrade has finished, the product restarts automatically.

AXIS Device Manager can be used for multiple upgrades. Find out more at axis.com/products/axis-device-manager

Technical issues, clues and solutions

If you can’t find what you’re looking for here, try the troubleshooting section at axis.com/support

### Problems upgrading the firmware

<table>
<thead>
<tr>
<th>Problem</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firmware upgrade failure</td>
<td>If the firmware upgrade fails, the device reloads the previous firmware. The most common reason is that the wrong firmware file has been uploaded. Check that the name of the firmware file corresponds to your device and try again.</td>
</tr>
</tbody>
</table>

### Problems setting the IP address

<table>
<thead>
<tr>
<th>Problem</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>The device is located on a different subnet</td>
<td>If the IP address intended for the device and the IP address of the computer used to access the device are located on different subnets, you cannot set the IP address. Contact your network administrator to obtain an IP address.</td>
</tr>
<tr>
<td>The IP address is being used by another device</td>
<td>Disconnect the Axis device from the network. Run the ping command (in a Command/DOS window, type ping and the IP address of the device):</td>
</tr>
<tr>
<td></td>
<td>• If you receive: Reply from &lt;IP address&gt;: bytes=32; time=10... this means that the IP address may already be in use by another device on the network. Obtain a new IP address from the network administrator and reinstall the device.</td>
</tr>
<tr>
<td></td>
<td>• If you receive: Request timed out, this means that the IP address is available for use with the Axis device. Check all cabling and reinstall the device.</td>
</tr>
<tr>
<td>Possible IP address conflict with another device on the same subnet</td>
<td>The static IP address in the Axis device is used before the DHCP server sets a dynamic address. This means that if the same default static IP address is also used by another device, there may be problems accessing the device.</td>
</tr>
<tr>
<td>The device cannot be accessed from a browser</td>
<td>When HTTPS is enabled, ensure that the correct protocol (HTTP or HTTPS) is used when attempting to log in. You may need to manually type http or https in the browser's address field. If the password for the user root is lost, the device must be reset to the factory default settings. See Reset to factory default settings on page 13.</td>
</tr>
</tbody>
</table>
**Troubleshooting**

- **The IP address has been changed by DHCP**: IP addresses obtained from a DHCP server are dynamic and may change. If the IP address has been changed, use AXIS IP Utility or AXIS Device Manager to locate the device on the network. Identify the device using its model or serial number, or by the DNS name (if the name has been configured).
  
  If required, a static IP address can be assigned manually. For instructions, go to axis.com/support

- **Certificate error when using IEEE 802.1X**: For authentication to work properly, the date and time settings in the Axis device must be synchronized with an NTP server. Go to Settings > System > Date and time

**The device is accessible locally but not externally**

To access the device externally, we recommend using one of the following applications for Windows®:

- AXIS Companion: free of charge, ideal for small systems with basic surveillance needs.
- AXIS Camera Station: 30-day trial version free of charge, ideal for small to mid-size systems.

For instructions and download, go to axis.com/products/axis-companion

**Problems with streaming**

<table>
<thead>
<tr>
<th>Problem Description</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multicast H.264 only accessible by local clients</td>
<td>Check if your router supports multicasting, or if the router settings between the client and the device need to be configured. The TTL (Time To Live) value may need to be increased.</td>
</tr>
<tr>
<td>No multicast H.264 displayed in the client</td>
<td>Check with your network administrator that the multicast addresses used by the Axis device are valid for your network.</td>
</tr>
<tr>
<td>Poor rendering of H.264 images</td>
<td>Check with your network administrator to see if there is a firewall preventing viewing.</td>
</tr>
<tr>
<td>Lower frame rate than expected</td>
<td>Ensure that your graphics card is using the latest driver. The latest drivers can usually be downloaded from the manufacturer’s website.</td>
</tr>
<tr>
<td></td>
<td>- See Performance considerations on page 15.</td>
</tr>
<tr>
<td></td>
<td>- Reduce the number of applications running on the client computer.</td>
</tr>
<tr>
<td></td>
<td>- Limit the number of simultaneous viewers.</td>
</tr>
<tr>
<td></td>
<td>- Check with the network administrator that there is enough bandwidth available.</td>
</tr>
<tr>
<td></td>
<td>- Lower the image resolution.</td>
</tr>
<tr>
<td></td>
<td>- The maximum frames per second is dependent on the utility frequency (60/50 Hz) of the Axis device.</td>
</tr>
</tbody>
</table>

**Performance considerations**

When setting up your system, it is important to consider how various settings and situations affect the performance. Some factors affect the amount of bandwidth (the bitrate) required, others can affect the frame rate, and some affect both. If the load on the CPU reaches its maximum, this also affects the frame rate.

The following factors are the most important to consider:

- High image resolution or lower compression levels result in images containing more data which in turn affects the bandwidth.
- Rotating the image in the GUI will increase the product’s CPU load.
- Access by large numbers of Motion JPEG or unicast H.264 clients affects the bandwidth.
- Simultaneous viewing of different streams (resolution, compression) by different clients affects both frame rate and bandwidth.

Use identical streams wherever possible to maintain a high frame rate. Stream profiles can be used to ensure that streams are identical.

- Accessing Motion JPEG and H.264 video streams simultaneously affects both frame rate and bandwidth.
- Heavy usage of event settings affects the product’s CPU load which in turn affects the frame rate.
AXIS Q19 Series

Troubleshooting

- Using HTTPS may reduce frame rate, in particular if streaming Motion JPEG.
- Heavy network utilization due to poor infrastructure affects the bandwidth.
- Viewing on poorly performing client computers lowers perceived performance and affects frame rate.
- Running multiple AXIS Camera Application Platform (ACAP) applications simultaneously may affect the frame rate and the general performance.
- Using palettes affects the product's CPU load which in turn affects the frame rate.
Specifications

To find the latest version of the product’s datasheet, go to the product page at axis.com and locate Support & Documentation.

**LED Indicators**

<table>
<thead>
<tr>
<th>Status LED</th>
<th>Indication</th>
</tr>
</thead>

<tr>
<td>Unlit</td>
<td>Connection and normal operation.</td>
</tr>
<tr>
<td>Green</td>
<td>Connection and normal operation.</td>
</tr>
<tr>
<td>Amber</td>
<td>Steady during startup. Flashes during firmware upgrade or reset to factory default.</td>
</tr>
<tr>
<td>Amber/Red</td>
<td>Flashes amber/red if network connection is unavailable or lost.</td>
</tr>
<tr>
<td>Red</td>
<td>Firmware upgrade failure.</td>
</tr>
</tbody>
</table>

**SD card slot**

**NOTICE**

- Risk of damage to SD card. Do not use sharp tools, metal objects, or excessive force when inserting or removing the SD card. Use your fingers to insert and remove the card.
- Risk of data loss and corrupted recordings. Do not remove the SD card while the product is running. Unmount the SD card from the product’s webpage before removal.

This product supports microSD/microSDHC/microSDXC cards.

For SD card recommendations, see axis.com

microSD, microSDHC, and microSDXC Logos are trademarks of SD-3C LLC. microSD, microSDHC, microSDXC are trademarks or registered trademarks of SD-3C, LLC in the United States, other countries or both.

**Buttons**

**Control button**

For location of the control button, see Product overview on page 4.

The control button is used for:

- Resetting the product to factory default settings. See page 13.
- Connecting to an AXIS Video Hosting System service. See . To connect, press and hold the button for about 3 seconds until the Status LED flashes green.

**Connectors**

**Power connector**

Terminal connector for connecting AC/DC power supply.

**Network connector**

RJ45 Ethernet connector with Power over Ethernet (PoE).
Multiconnector
Terminal connector for connecting external equipment:

- Audio equipment
- Input/Output (I/O) devices
- DC power supply

When connecting external equipment, a separately sold Axis multicable is required in order to maintain the product’s IP rating. For more information, see Multicable connectors on page 18.

Multicable connectors

1. Camera power connector
2. Camera multiconnector
3. Power connector
4. I/O terminal connector
5. Audio in (pink)
6. Audio out (green)

The multicable provides the following connectors:

**Power connector** – 2-pin terminal block used for power input. The polarity of the cables does not matter. Use a Safety Extra Low Voltage (SELV) compliant limited power source (LPS) with either a rated output power limited to ≤100 W or a rated output current limited to ≤5 A.

**Audio in (pink)** – 3.5 mm input for a mono microphone, or a line-in mono signal (left channel is used from a stereo signal).

**Audio out (green)** – 3.5 mm output for audio (line level) that can be connected to a public address (PA) system or an active speaker with a built-in amplifier. A stereo connector must be used for the audio out.

**I/O terminal connector** – Use with external devices in combination with, for example, tampering alarms, motion detection, event triggering, and alarm notifications. In addition to the 0 V DC reference point and power (DC output), the I/O connector provides the interface to:

- Digital output – For connecting external devices such as relays and LEDs. Connected devices can be activated by the VAPIX® Application Programming Interface or from the product’s webpage.
AXIS Q19 Series

Specifications

- Digital input — For connecting external devices that can toggle between an open and closed circuit, for example PIR detectors, door/window contacts, and glass break detectors.
