

Axis Introduces Fixed Dome Network Camera for Professional Video Surveillance

LUND, Sweden. – (Sept. 13, 2005) – Axis Communications, the global leader in the network video market, announced today the AXIS 225FD Fixed Dome Network Camera, a high performance camera offering progressive scan, Power over Ethernet (PoE) and a built-in heater. The network camera has a vandal-resistant, outdoor-proof design that makes it ideal for prisons, campuses, parking garages, railway stations, and other environments where impact resistance and weatherproofing is required.

The AXIS 225FD utilizes simultaneous Motion JPEG and MPEG-4 video compression to optimize both video quality and bandwidth consumption. It also has PoE functionality, according to the IEEE 802.3af standard, which reduces installation costs and consolidates the power source to a central location. The day and night camera uses an automatically removable infrared filter that enables high-quality images under all lighting conditions, including color video in high- and low-light conditions and black-and-white video in dark conditions.

“The AXIS 225FD is Axis’ first fixed-dome network camera model, complementing the extensive existing product portfolio of professional-level network cameras,” said Johan Lembre, Vice President, Product Management of Axis Communications. “Due to the increasing requirement for network cameras in harsh environments, Axis has launched this smart all-in-one product to enhance the convenience for our partners and installers.”

The AXIS 225FD uses a progressive scan CCD image sensor that enables moving images to be presented without distortion or blur up to 30 frames per second in VGA resolution. It also offers the highest security measures through the use of multi-level password protection, IP address filtering and HTTPS encryption. Available accessories include ceiling-mount brackets for installation on indoor ceilings and smoked glass for increased discretion.

The AXIS 225FD is supported by the industry’s largest base of application software through the Axis ADP program. The network camera will be available through Axis’ distribution channels in Q4 2005, for the manufacturer’s suggested retail price of \$1,099.

About Axis

Axis increases the value of network solutions. The company is an innovative market leader in network video and print servers. Axis' products and solutions are focused on applications such as security, surveillance, remote monitoring and document management. The products are based on in-house developed chip technology, which is also sold to third parties.

Axis was founded in 1984 and is listed on the O-list (Attract 40) of Stockholmsbörsen (XSSE: AXIS). Axis operates globally with offices in 16 countries and in cooperation with distributors, system integrators and OEM partners in 70 countries. Markets outside Sweden account for more than 95% of sales. Information about Axis can be found at www.axis.com.
