Axis introduces small and affordable wireless cameras with support for hosted video services

Axis Communications today presents small and affordable AXIS M1033-W and AXIS M1034-W Network Cameras with wireless capability and smart video surveillance features. They offer wide-ranging video management support as well as Axis' unique One-Click Camera Connection for easy hookup to a hosted video service over the Internet. They are ideal for securing locations such as small businesses, retail stores, restaurants, hotels and residences where a wired connection may be difficult or undesirable.

"AXIS M1033-W and AXIS M1034-W enable intelligent, cost-efficient surveillance for on-site or hosted video systems and they represent an attractive addition to our AXIS M10 Series," says Erik Frännlid, Director of Product Management, Axis Communications. "These new wireless cameras, with a push-button for easy WLAN pairing, provide small businesses and residential users with an effective and easy-to-install surveillance tool."

These latest models of the AXIS M10 Series provide excellent video quality at 30 frames per second in both SVGA (AXIS M1033-W) and HDTV 720p (AXIS M1034-W) resolutions. They feature wireless capabilities with WiFi Protected Setup protocol (WPS), which simplifies the process of configuring logical security on wireless networks. The combination of the wireless 802.11b/g/n standard and the WPS protocol assures user-friendliness and high network security, while enabling HDTV video to be streamed reliably over a wireless network.

The cameras also feature a passive infrared (PIR) sensor for detecting movement in the dark and a white LED light for illuminating the scene automatically when motion is detected or when activated by the user. They support two-way audio with an integrated microphone and speaker, allowing users to listen in on an area as well as playback a recorded audio clip to visitors or intruders remotely. In addition to these features, they include I/O ports for connecting devices such as door sensors to initiate video recording and external relays to activate lights.

AXIS M1033-W and AXIS M1034-W models are supported by the industry's largest base of video management software through the [Axis Application Development Partner Program](#), and [AXIS Camera Station](#). The cameras include support for [hosted video](#) with One-Click Camera connection for managing video hosting services over the Internet; and ONVIF for easy camera system integration.

AXIS M1033-W and AXIS M1034-W are expected to be available for order in Q2 2012. For photos and other resources, please visit http://www.axis.com/corporate/press/press_material.htm?key=m1034w.
