Axis introduces the first camera in a new series of multi-sensor fixed domes with panoramic overview

AXIS Q3709-PVE Network Camera has three 4K sensors that together provide a detailed 180° overview of a large area, outdoors as well as indoors, in an efficient one-camera installation. The camera provides video with unparalleled streaming performance, smoothly capturing movements in high detail at 30 frames per second.

Axis Communications, the market leader in network video, introduces the first camera in the new AXIS Q37 Series. AXIS Q3709-PVE provides situational awareness of a large area, making the camera ideal for city surveillance applications, as well as in installations in logistic centers, airports and train stations.

“An effective one-camera installation providing overview and image detail at the same time is an efficient way to ensure that surveillance needs are met in large open areas,” Erik Frännlid, Axis’ Director of Product Management explains. “Multi-sensor cameras are also well-suited in applications such as squares, stadiums, parking lots and perimeter surveillance, where large areas need to be monitored in high image detail in order to ensure complete situational awareness.”

Installation is easy, reliable and cost-efficient. No focusing is required since the lenses are factory-focused. The camera comes in a stylish and discreet design with an easily repaintable and removable weather shield that protects against rain, snow and sunlight and allows for easy blending in with the environment.

The camera provides a perfect 180° overview in up to 33 megapixel resolution. It offers a video streaming performance of 3 × 4K at 30 fps or 3 × 11 megapixels at 20 fps.

Further features of AXIS Q3709-PVE include:

The camera is outdoor-ready with IP66 and NEMA 4X ratings.

It is vandal-resistant with IK10 rating.

It can operate in a wide temperature range with standard Power over Ethernet (PoE+).

The camera offers video motion detection and tampering alarm.

The camera is supported by the industry's largest base of video management software through the Axis Application Development Partner Program, and AXIS Camera Station. The camera also includes support for edge storage, AXIS Camera Application Platform, AXIS Video Hosting System and ONVIF for easy camera system integration and for application developers to provide the camera with intelligent capabilities.

AXIS Q3709-PVE is planned to be available in Q2 2015 through Axis distribution channels.
