Axis introduces an outdoor bullet-style thermal network camera with Zipstream technology and powerful performance for analytics via ACAP

AXIS Q1941-E offers outstanding high contrast thermal images and is the first thermal camera to support both Electronic Image Stabilization, which helps reduce the effect of vibrations, and Axis' Zipstream technology, which lowers bandwidth and storage requirements.

Axis Communications, the global leader in network video surveillance, today announced a strong addition to its Q-line of fixed thermal cameras, AXIS Q1941-E Thermal Network Camera. The affordable and bullet-style IP camera is designed for 24/7 detection in challenging conditions. The camera is outdoor-ready out-of-the-box and is ideal for perimeter protection of facilities where early detection of an intrusion attempt is critical.

“Thermal cameras are not only reliable for round-the-clock detection, but are also useful for verification, helping to distinguish between a real and false alarm,” said Fredrik Nilsson, General Manager, North America, Axis Communications, Inc. “Thanks to its powerful processor, AXIS Q1941-E is highly capable of running video analytics via the AXIS Camera Application Platform (ACAP). Together with our ADP Partners, customers can find a tailored surveillance solution that meets their specific needs.”

AXIS Q1941-E offers 384x288 thermal resolution and outstanding image contrast for reliable detection and quick verification. Thanks to a selection of five different lens alternatives (7 mm, 13 mm, 19 mm, 35 mm and 60 mm) that optimize detection performance, customers can be sure the camera will meet their requirements. In addition, the following capabilities make AXIS Q1941-E the flagship for AXIS Q19 Series:

The camera can easily be integrated with other existing IP security equipment and with third party applications via the AXIS Camera Application Platform (ACAP).

Electronic Image Stabilization (EIS) provides smooth live viewing even when the camera is mounted on an unstable surface, where vibration can be an issue.

Axis' Zipstream technology analyzes and optimizes the video stream in real time to preserve interesting details and motion with full image quality and resolution, while compressing static areas, such as white walls or vegetation, at a higher rate. This significantly reduces the bandwidth and storage required.

AXIS Q1941-E Thermal Network Camera is planned to be available in Q4 2015 through Axis' standard distribution channels at a suggested retail price ranging from \$2,799 to \$5,299 depending on the lens model.

About Axis Communications

Axis offers intelligent security solutions that enable a smarter, safer world. As the global market leader in network video, Axis is driving the industry by continually launching innovative network products based on an open platform - delivering high value to customers through a global partner network. Axis has long-term relationships with partners and provides them with knowledge and ground-breaking network products in existing and new markets.

Axis has more than 2,000 dedicated employees in 49 countries around the world, supported by a network of over 75,000 partners across 179 countries. Founded in 1984, Axis is a Sweden-based company listed on NASDAQ Stockholm under the ticker AXIS. For more information about Axis, please visit our website www.axis.com.
