

Integrated security control within reach.

Axis and Entelec offer integrated security solutions for small and mid-size customers.

Small and medium sized buildings have the same security management requirements as large buildings, but often don't have specialized resources to manage them. Frequently, it is the receptionist or caretaker that is responsible for managing video surveillance, intercom, intrusion and access control all in addition to their primary job duties. With a focus on simplicity and ease-of-use, Axis and Entelec offer small and mid-size customers an integrated security management solution that any staff member can easily manage, while still maintaining their primary job focus.

Entelec's Sky-Walker STRATO unified security management platform combines open access intercom and intrusion with access control and video from Axis, into a fully integrated mobile security solution for small and medium businesses.

The user interface of Sky-Walker STRATO provides full control, monitoring and administration of all security systems from a centralized high definition display. The graphical and intuitive setup makes the system easy to operate without the need for having any technical skills or extensive training.

Combining all control functions into one interface provides operational control of all relevant security functions from a single tablet, smartphone or workstation.

The integrated solution is made possible through open platform network security products from Axis. For access control, the AXIS A1001 Network Door Controller is an independent unit that can be installed at each door, completed with third-party door accessories such as sensors, door locks and readers. And for video surveillance, HDTV quality Axis network cameras can provide reliable, high-quality video verification of access control events.

Flexible and cost-effective

Sky-Walker STRATO platform is designed to be completely modular and is composed of many services running independently from each other. This flexibility gives customers all the system features they need in a single, cost-effective solution. Likewise, traditional access control systems are inflexible and built to accommodate a maximum number of doors, normally 4, 8, 16, or 32. However, with the AXIS A1001 Network Door Controller, customers can exactly match the number of doors for which they need access control, say 9 or 17 doors. They can also choose from the industry's broadest and most consistent range of cameras to meet their specific surveillance needs.

Easy and intuitive

With Power over Ethernet (PoE), Axis network door controller and cameras are easy to install and configure with minimal cabling. Color coded connectors and the configuration wizard in the AXIS A1001 enables fail-safe and effective installations.

Additionally, the intuitive graphical user interface of Sky-Walker STRATO gives access to all connected systems. With only one user interface, training time and cost is reduced and users can easily configure interactions between various systems – such as an unauthorized access alert triggering a specific camera recording.

- > **Unified security management in a single graphical user interface**
- > **Easy to install and use**
- > **Complete mobility with tablet integration**
- > **Full integration with Axis network cameras and door controller**
- > **Modular, cost-efficient solution to match specific customer needs**
- > **Robust integrated reporting capabilities**

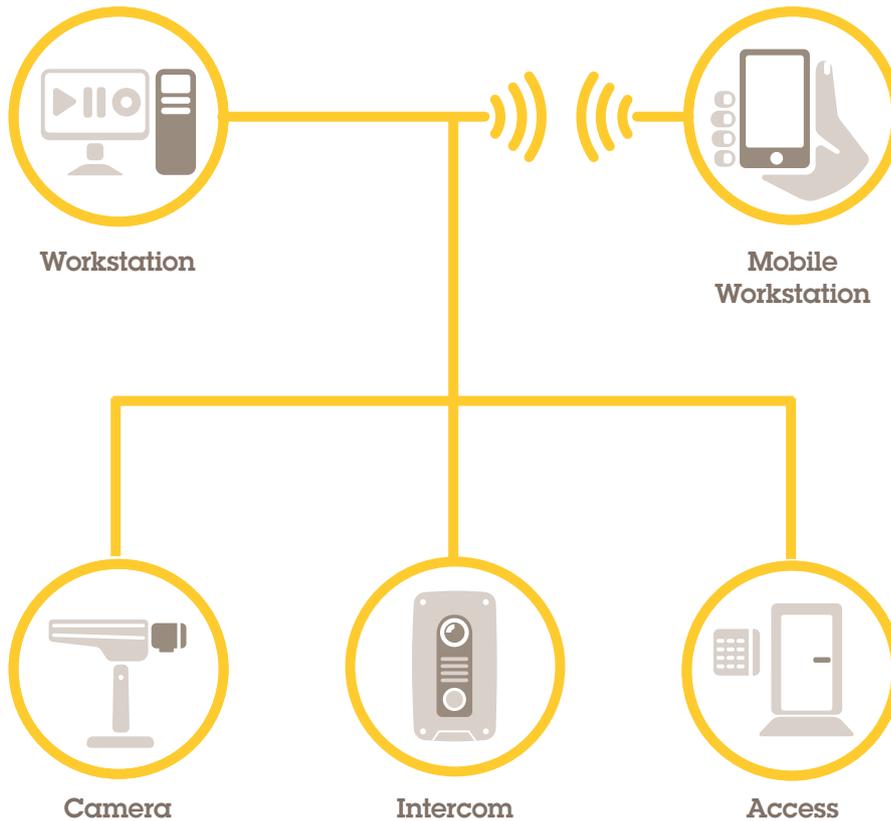

Advanced features and robust reporting

Axis door controller is compatible with most door readers, and Axis cameras provide a number of capabilities – HDTV, wide dynamic range, infrared and Lightfinder – which ensure clear video even in difficult lighting conditions. Axis' cameras also provide advanced video analytics features, such as motion detection, audio detection and tampering alarm.

When integrated with Sky-Walker STRATO, customers can easily manage all security processes as well as create reports for all security matters at facility level – in-

cluding a detailed overview on building occupancy or an analysis of false alarms.

Remote monitoring & control is also available on mobile devices such as tablets. If an operator has to leave the desk temporarily, supervision of security events is still possible. And in the event that there is no-one in building Sky-Walker STRATO still monitors alarms, system and technical messages. Critical alarms can be forwarded to preconfigured e-mail addresses to assure fast response and follow-up.

Summary of the Axis and Entelec solution:

With a modular and intuitive design, you will have a complete security management solution which is cost-efficient and meets any customer's needs.

Why network video and access control?

- > HDTV quality video verification of access control events
- > Remote accessibility
- > Easy, future-proof integration
- > Scalability and flexibility
- > Cost-effectiveness
- > Distributed intelligence
- > Proven technology

Why Axis?

- > Worldwide #1 in network video, the world's leading expert
- > Proven installations across all continents
- > Broadest product portfolio in the industry
- > The largest installed base of network video products
- > Over 30 years of networking excellence

Why Entelec?

- > + 20 years in the integrated security systems market
- > Experienced in developing a large number of interfaces to ensure that multiple building systems interact seamlessly.
- > Offer a unique and graphical interface to manage entire infrastructures on multiple sites
