

# AXIS NETWORK CAMERA CAPTURES BAMBUCO

Axis Network Camera, which is primarily used for security & surveillance applications, is now one of the first to see the Bambuco installation piece in action at Esplanade – Theatres on the Bay, Singapore.

The Bambuco is a specially commissioned 25m-high bamboo installation, situated at the Esplanade, Waterfront, from October 12th to November 3rd 2002. This amazing structure is more than just an art work as it will also serve as a stage for aerial arts, dance & music performances.

Using Axis 2120 Network Camera, high resolution images of the bamboo installation are captured. The construction process, which is being installed by 11 Bambuco crew from Australia, New Zealand, Netherlands, USA & Germany, & 6 local climbers from Singapore, are captured by Axis network camera. Axis' small state-of-the-art network camera is linked to Esplanade's existing network & the images are made accessible to people anywhere in the world over an Intranet or Internet.

The different images captured, were used to develop a time-lapsed photography sequences, to be adapted during Esplanade Opening video production

developed by Passport Pictures. This video production has been broadcast on Esplanade's Opening Day on October 12.

Axis network camera has received favourable response from Esplanade's two other vendors, Passport Pictures & Bambuco. Mr Martin Coster, Managing Director of Passport Pictures, is very impressed with the product. "When we first discussed making the time-lapsed video, I was initially concerned about the image quality a webcam could provide. I'm pleased to say my concerns were unfounded - the Axis network camera produces clean, crisp, full resolution images. And the flexibility of the hardware and software meant we could configure the camera exactly as we needed."

Mr Erik Pootjes, Director of Bambuco, is also delighted with the application. "Within Bambuco, we are always discussing about using webcams or network cameras at our installation site and are very delighted with this opportunity in Singapore. Axis network camera is very easy to install. After a little fine-tuning, the images are clear & of great quality. This experience convinced us of the use of Axis network cameras in our future projects."
